Nursing Best Practice Guidelines Program
Educator’s Resource: Integration of Best Practice Guidelines

Joy Roumanis, RPN
Staff Educator
Drs. Paul and John Rekai Centre
Toronto, Ontario

Jane M. Schouten, RN, BScN, MBA
RNAO Program Staff – Facilitator
Program Coordinator
Best Practice Guidelines Program
Registered Nurses’ Association of Ontario
Toronto, Ontario

Patricia Sevean, RN, BScN, MA, MEd, EdD(C)
Assistant Professor
Lakehead University, School of Nursing
Thunder Bay, Ontario

Judy Stanley, RN, BScN, MN
Nursing Instructor
Sir Sandford Fleming College
Peterborough, Ontario

Tazim Virani, RN, MScN, PhD(C)
Program Director
Best Practice Guidelines Program
Registered Nurses’ Association of Ontario
Toronto, Ontario

Declarations of interest and confidentiality were made by all members of the development panel. Further details are available from the Registered Nurses’ Association of Ontario.

Acknowledgements

Stakeholders representing academic and clinical perspectives were solicited for their feedback and the Registered Nurses’ Association of Ontario wishes to acknowledge the following for their contribution in reviewing the Educator’s Resource:

Carina Barrie, RN, BScN, CCN(C)
Clinical Educator, Medical Cardiology
Thunder Bay Regional Health Sciences Centre
Thunder Bay, Ontario

Lisa Beck, RN, BScN, MScN
Critical Care Educator
Thunder Bay Regional Health Sciences Centre
Thunder Bay, Ontario

Patricia Bethune-Davies, RN, BScN, MScN
Professor
Fanshawe College
London, Ontario

Janet Bray, RN, BScN
Project Nurse, Student Placement Coordinator
Bloorview MacMillan Children’s Centre
Toronto, Ontario

Patricia Brown, RN, BScN
Coordinator, Practical Nursing Program
Centennial College
Toronto, Ontario

Beryl Cable-Williams, RN, BScN, MN
Professor of Nursing
Trent/Fleming School of Nursing
Fleming College
Peterborough, Ontario

Linda Calbeck, RN
Clinical/Telehealth Coordinator
Dryden Regional Health Centre
Dryden, Ontario

Rhonda Crocker, RN, BScN, MA, EdD
VP Patient Care Services & CNO
Thunder Bay Regional Health Sciences Centre
Thunder Bay, Ontario

Samantha Dalby, RN, BScN, BA, PHCNP (C)
Clinical Educator, Complex Continuing Care
Peterborough Regional Health Centre
Peterborough, Ontario

Sally Dampier, MMedSc, BScN, RLN, PGDE, RSCN, SRM
Lecturer
School of Nursing
Lakehead University
Thunder Bay, Ontario

Julie Duff Cloutier, RN, BScN, MSc, CAE
Assistant Professor
School of Nursing
Laurentian University
Sudbury, Ontario

Susan Eldred, RN, BScN, MBA
Lecturer, Doctoral Nursing Student
University of Ottawa
Ottawa, Ontario

Janice Elliott, RN, MScN
Professor
Fanshawe College
London, Ontario

Cheryl Evans, RN, MScN
Nursing Professional Practice Consultant
St. Joseph’s Healthcare Hamilton
Hamilton, Ontario

7/13/2005 11:25:56 AM
The Educator’s Resource: Integration of Best Practice Guidelines (Educator’s Resource) is part of the larger Best Practice Guidelines (BPG) Program initiated by the Registered Nurses’ Association of Ontario (RNAO) and funded by the Government of Ontario. It is designed to help educators, whether they work in academic settings or practice settings, to plan, implement and evaluate learning events for nurses, whether staff or students, to promote integration of BPG into practice. This resource should be used in conjunction with other materials developed for the Program, including the RNAO Toolkit: Implementation of Clinical Best Practice Guidelines (RNAO, 2002), introductory video, Making it Happen, and the guidelines themselves.
What is the Nursing Best Practice Guidelines Program?
The Nursing Best Practice Guidelines (BPG) Program aims to bridge the
gap between research and practice and ensure that the most current
available knowledge is put to use for the benefit of the public who receive
nursing care. The overall aim of the program is to improve the quality of
care that nurses and other health care professionals provide to the public.
Specifically, the program aims to:

1. Reduce the variation in care by encouraging consistency in high
   quality care based on best available knowledge;
2. Stop interventions that have little effect and/or cause harm;
3. Transfer research and other best available knowledge to practice;
4. Promote the nursing knowledge base;
5. Assist clinicians and patients with health care decision-making;
6. Inform organizational and policy decision-making;
7. Improve practice, system and health care outcomes;
8. Identify research gaps; and
9. Reduce costs through achievement of better outcomes.

Through a multi-faceted dissemination and uptake strategy, the BPG
Program has enjoyed success in ensuring that these knowledge products
reach across the continuum of nursing education to ensure that nursing
students and front line staff can care for patients using the best available
knowledge. With increasing awareness and access to BPG, there is a
demand for support/assistance in implementing and integrating BPG
into education and practice. The Educator’s Resource: Integration of Best
Practice Guidelines is, therefore, developed to address this need.

What is the purpose of the Educator’s Resource?
This resource has been developed to assist you as an educator in
introducing BPG to student nurses, to faculty and to nurses and
colleagues in their practice settings. It is a supplement to the RNAO
Toolkit: Implementation of Clinical Practice Guidelines (RNAO, 2002). We
recommend that both the Educator’s Resource and the Toolkit be used
to plan, implement and evaluate a comprehensive strategy for BPG
implementation in both academic and practice settings.

Who can benefit from the Educator’s Resource?
The Educator’s Resource has been developed for educators in both
academic and practice settings. It can also be utilized by any nurse
interested in facilitating learning about BPG.
The Educator’s Resource is organized to provide you with “need-to-know” content and, in Chapter 6: Enrichment Materials, “nice-to-know” content. Chapters are organized using the Framework for Integration of Best Practice Guidelines into Learning Events (Figure 1). Each of the chapters’ “need-to-know” content corresponds to one of the four elements of the framework. They are:

Chapter 2 Assessment for the Learning Event;
Chapter 3 Planning the Learning Event;
Chapter 4 Implementing Teaching/Learning Strategies; and
Chapter 5 Evaluation.

The framework in Figure 1 represents nursing as a knowledge-based practice discipline integrating both the art and science of nursing. These qualities are enhanced through the integration of BPG into practice. The desired outcome is improved quality of nursing care and patient outcomes. This four-step framework incorporates the student, the BPG, the learning event and the educator. The centre of the framework represents the learner and BPG. Each arrow of the framework demonstrates the activities the educator must perform in order to have a successful learning event. These include the four main steps outlined in Chapters 2, 3, 4 and 5 of this resource. The four aspects of the model are depicted in a circular manner because the process of learning and teaching is cyclical and aspects of various elements of the framework may overlap or occur simultaneously.
How was the Educator’s Resource developed?

A broad based development panel of 12 nurse educators from both academic and practice settings was convened by RNAO. Over an eight-month period, the panel worked to conceptualize, articulate and develop the Educator’s Resource. The process included a review of the relevant literature and the creation of a guiding framework to assist in organizing the key components of the Educator’s Resource (Figure 1). This process yielded a draft which was submitted to a set of external stakeholders for review and feedback. An acknowledgement of these reviewers is provided at the front of this document.

Stakeholders represented various educators from both practice and clinical settings. External stakeholders provided feedback through focus groups and written communication. The final results of this feedback were compiled and reviewed by the development panel. Discussion and consensus resulted in revisions leading to the final document.

Roadmap to using the Educator’s Resource

The Educator’s Resource is divided into five main chapters to guide you through the steps of the framework as you develop a learning event.

Each chapter is organized in a similar manner with the following headings:

1. What is this chapter about? (outlining the steps of the process);
2. Steps (description of the steps and specific content discussion relevant to the chapter);
3. Scenarios (two case studies that apply information from the chapter);
4. Key Points (summary of the chapter);
5. References;
6. Bibliography; and

These chapters are followed by Chapter 6: Enrichment Materials. This is a composite of additional information and resources for those educators who require more in-depth information. It is the “nice-to-know” section of the Educator’s Resource.

Directional Icons

Table 1 contains the icons that are used throughout the Educator’s Resource and explains their meanings. The icons provide direction to specific information and resources. Icons are located in the margins and provide direction by indicating the page number where additional content and/or materials are located.

A PowerPoint presentation on the BPG Program; and all blank templates found in the Tips, Tools and Templates section of each chapter. |
| ![Website] | **Websites**  
Where educators can obtain additional resources and information. |

**Scenarios**

Chapters 2, 3, 4 and 5 contain two scenarios which demonstrate how the chapter content can be practically applied. One scenario takes place in an academic setting and the other occurs in a practice setting. The two scenarios are introduced below and in each subsequent chapter the “story” continues, taking the educator from the beginning to the end of the process outlined in the framework.
Academic Setting

Cynthia is a new faculty member at the School of Nursing. She has been employed by the School for one year and has taught two courses—one for first year nursing students (Introductory Nursing Concepts) and a second course to fourth year students (Advanced Nursing Concepts). In addition, she is supervising 12 fourth-year students during their final clinical consolidation placement.

In Cynthia’s last place of work, she had been an active Best Practice Champion and attended a two-day workshop provided by RNAO. For a detailed description of the Best Practice Champion Network see Chapter 6: Enrichment Materials (p. 96). She has worked diligently to incorporate various BPG into her courses and to expose her students to the various evidence-based resources available on the RNAO website. In her first year at the School of Nursing, she learned that faculty were not familiar with the RNAO work on best practice guidelines but they were interested in learning more.

Cynthia discussed the RNAO work with the Director of the School of Nursing who recommended that Cynthia join the School Curriculum Committee and present on BPG at the next meeting. Cynthia used the Introduction to RNAO Best Practice Guidelines PowerPoint presentation, available as part of the Educator’s Resource (CD3).

After Cynthia’s presentation, the committee members provided her with positive feedback and brainstormed various ideas of bringing the guidelines into the curricula. First, however, they concluded that the entire teaching staff of the School needed to learn about the guidelines and associated resources. The Curriculum Committee accepted the members’ recommendation and a planning group was established to plan and deliver the Faculty Workshop.

The planning group used the Educator’s Resource to identify which resources would be helpful in achieving their goal. They decided to use the following resources:
Cynthia agreed to be the ongoing link between the faculty and RNAO in her role as a Best Practice Champion and to ensure new information and resources are communicated to her colleagues.

The reader is asked to reflect on the following:

- What does Cynthia need to know prior to bringing knowledge of BPG to the School of Nursing?
- How will Cynthia bring knowledge of RNAO BPG Program to the School of Nursing?
- How will she assess the readiness of the faculty, students, curriculum committee and other stakeholders?
- What strategies will Cynthia use to influence the incorporation of BPG at various levels and depths?
- What strategies will she use to implement BPG into her course work?
- How will she know that her efforts are making a difference? How will she evaluate her efforts?
- How will she know that her students are acquiring the knowledge? How will she evaluate her students with respect to acquired knowledge?
Practice Setting

John has been a nurse educator at a medium-sized suburban hospital for the past eight years. He has been practicing in various medical/surgical units since he graduated 20 years ago. Recently, a new Chief Nursing Officer (CNO) was hired and one of the first areas of strategic focus she laid out is the implementation of several BPG in the organization. John and his colleagues have heard about the RNAO work on BPG at various conferences but have not actively addressed how they would implement them in their organization. A steering committee has been established and John's role on the committee is to help plan the education sessions for implementing two BPG: *Screening for Dementia, Delirium and Depression in Older Adults* (RNAO, 2003), and *Care Strategies for Older Adults with Delirium, Dementia, and Depression* (RNAO, 2004) (DDD). John is feeling rather overwhelmed. He is only one of three nurse educators who supports the nursing staff for a facility with 400 beds and many outpatient programs.

John's CNO provided him with a copy of the RNAO Educator's Resource. As he was responsible mainly for the educational sessions, John ensured that the steering committee was aware of other resources that could be used to introduce the RNAO BPG to staff and to the organization. The steering committee members made the following decisions:

- **a** To use the *Toolkit: Implementation of Clinical Practice Guidelines* (RNAO, 2002) to guide the overall planning and implementation of the project.
- **b** To show the RNAO video, *Making it Happen* at various forums over a two-month period while the committee was still in the planning phases. *(CD2)*
- **c** To target four units to start the implementation.
- **d** To provide John with additional resources to support the educational process, including preparation of 12 nurses from the target units to become BPG Resource Nurses.
- **e** To develop an initial one-day education workshop for these Resource Nurses.
To submit a proposal to have John and the 12 Resource Nurses attend the RNAO Best Practice Champions workshops and participate actively in the Champions Network.

The reader is asked to reflect on the following:

- What does John need to know prior to creating a learning plan?
- What tools will he need to apply and incorporate this new knowledge into an education plan in order to implement BPG in the organization? (i.e., learning plan template, available teaching materials?)
- How will he deliver the learning plan? How can he use his existing strategies (e.g. coaching/mentoring, using outside sources) to assist him to deliver the education plan?
- How will he evaluate the learning event?
- How will he evaluate the success of implementing BPG?
Tips, Tools & Templates

The following items can be used in introducing and promoting BPG in your organization. These have been especially designed to assist nurses, in all domains of practice, to engage others in dialogue about BPG.

1. Nursing Best Practice Guidelines Program containing all published BPG, including the Toolkit, Health Education Fact Sheets (HEFS), and French translations in PDF format (CD1)
2. Making it Happen, a 28-minute video that introduces the best practice guideline program (CD2)
3. Introduction to RNAO Best Practice Guidelines (PowerPoint presentation) (CD3)
4. Blank templates (CD3)
5. Nursing Best Practice Guideline: A Phenomenal Journey [brochure]
6. Nursing Best Practice Guideline: Spreading the News [flyer]
7. Nursing Best Practice Guideline Newsletter: Shaping the Future of Nursing [most recent publication]
8. Best Practice Guideline Champions Network [flyer]
9. Best Practice Guideline Champions Newsletter [most recent publication]
10. BPG Order Form – The order form may not contain recently published BPG. To get the most current listing of published BPG, visit www.rnao.org/bestpractices.

These materials can be found in a folder at the back of the binder.
What is this chapter about?

In order to have a successful learning event, there must be an assessment. The steps you will take to conduct the assessment are:

1. Assess the environment;
2. Assess the educator;
3. Assess the learner;
4. Conduct a learning needs assessment; and
5. Assess the group.

Assumption  Prior to assessment, you will have chosen the BPG for your learning event.

Assessment

Assessment is a holistic process that includes three phases: pre-assessment, ongoing assessment, and post-assessment (evaluation). This chapter will focus on the pre-assessment strategies that you apply throughout the learning event.
Step 1: Assess the Environment
Organizational readiness will not be covered in this chapter. If you require information on this step refer to the RNAO Toolkit: Implementation of Clinical Practice Guidelines: Chapter 3 Assessing Your Environmental Readiness (p. 39-46).

Step 2: Assess the Educator

Assessing your Knowledge of BPG
In your role as educator, it is important to conduct a self-assessment of your current knowledge of BPG. See Tips, Tools and Templates for the Educator’s Self-Assessment of BPG Knowledge, (p. 29). Your knowledge level about BPG could range from novice to expert and will affect the strategies you use to assess, plan, implement and evaluate the learning event. Following your knowledge assessment, you will need to reflect on your personal philosophy of teaching and learning and your teaching style.

Assessing your Teaching Philosophy
Before planning the learning event, reflect on your philosophy of teaching and learning to identify how you will approach its planning and delivery.

Apps (1991) described a series of self-directed exercises to assist the educator in developing their teaching philosophy. These exercises can be found at http://www.adm.uwaterloo.ca/infotrac/tips/teachingphilosophysampleexercises.pdf.

Assessing Your Teaching Style
There are a variety of teaching styles that can be grouped into four basic types including:

1. **Expert/Formal Authority**, tends toward educator-centred classrooms in which information is presented and students receive knowledge.
2. **Personal/Expert**, an educator-centred approach that emphasizes modeling and demonstration the approach encourages learners to observe processes as well as content.
3. **Facilitator/Personal**, a learner-centred approach for the classroom. Educators design activities, social interactions, or problem-solving situations that allow students to practice the processes for applying course content.
4. **Delegator/Facilitator** places much of the learning burden on the students. Educators provide complex tasks that require learner initiative, and often group work, to complete.
Table 2 outlines how these teaching styles affect classroom methods, sensitivity to student learning style, capability of learners to cope with educational demands, control of classroom tasks, and willingness of the educator to build and maintain relationships. If you understand the possibilities and limits of your own teaching style you can make more consistent decisions on how to best utilize that style (Conti, 1990).

**Table 2: Teaching Styles and their Application**

<table>
<thead>
<tr>
<th>Teaching Styles</th>
<th>Expert</th>
<th>Personal</th>
<th>Facilitator</th>
<th>Delegator</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Classroom Methods</strong></td>
<td>Traditional educator-centred presentations and discussion techniques.</td>
<td>Role modeling and coaching/guiding learners, educator-centred.</td>
<td>Collaborative learning and other learner-centred learning processes consistently emphasized.</td>
<td>Emphasis on independent learning activities for groups and individuals.</td>
</tr>
<tr>
<td><strong>Degree of Sensitivity to Student Learning Style</strong></td>
<td>(Low) Differences between learners not considered, students are treated alike.</td>
<td>(Moderate-High) Must know how to teach learners who possess different styles and be able to encourage collaborative learning.</td>
<td>(Moderate-High) Consults with learners and suggests alternative approaches, educator must be able to encourage expression.</td>
<td>(Moderate-High) Acts as a consultant and resource person for learners, must be able help learners to develop independence.</td>
</tr>
<tr>
<td><strong>Capability of Students to Cope with Course Demands</strong></td>
<td>(Low-Moderate) Do not typically display what they know.</td>
<td>(Moderate) Need adequate knowledge and skill, must take initiative, accept feedback and be motivated to improve.</td>
<td>(Moderate) Need adequate levels of knowledge, initiative, and a willingness to accept responsibility for learning.</td>
<td>(High) Need proficient levels of knowledge and skill, must take initiative and accept responsibility for their learning.</td>
</tr>
<tr>
<td><strong>Control of Classroom Tasks</strong></td>
<td>(Moderate-High) Works best with educators who are willing to control the content presented.</td>
<td>(Moderate) Important for educator to periodically empower learners to show what they can do.</td>
<td>(Low-Moderate) Educator to get tasks going then turns the processes of learning over to the learners.</td>
<td>(Low) Important for educator to move into the background and serve as a consultant and resource person.</td>
</tr>
<tr>
<td><strong>Willingness of Educator to Build/Maintain Relationships</strong></td>
<td>(Low) Classroom tasks do not normally demand development of relationships with learners or help for learners to do so with classmates.</td>
<td>(Moderate-High) Effective models are liked and respected by learners.</td>
<td>(Moderate-High) Good relationships facilitate the educator’s role as consultant and make learners willing to share their ideas.</td>
<td>(Low-Moderate) Learners must manage their own interpersonal processes in groups, good learner/educator communication needed.</td>
</tr>
</tbody>
</table>

Step 3: Assess the Learner

Learners learn in a variety of ways. Acknowledging this involves the recognition of the following factors:
- Principles of adult learning;
- Concepts of Benner’s Model of Novice-to-Expert;
- Learning styles; and
- Motivational factors.

Principles of Adult Learning (Andragogy)

Understanding how adults approach learning can help you to plan programs. According to Knowles (1984) and Knox (1986) there are four basic characteristics that distinguish adults from children in regards to their learning. Adults:
1. Are self-directed;
2. Have experience to apply to the learning;
3. Have a need to address real-life problems; and
4. Have a need to apply learning immediately in order to value the learning.

As the educator you should assess learners based on these characteristics. Chapter 6: Enrichment Materials, contains suggestions as to how to assess learners according to principles of adult learning and other learner qualities (Tables 14-17, p. 98-101).

Benner’s Model of Novice-to-Expert

Benner’s work on learner development and progression is important for you to consider when planning an educational session. Nurses with varied experiences will require different educational strategies when presented with BPG.

Patricia Benner (2001) describes five stages of nurse development. These are:
1. Novice;
2. Advanced beginner;
3. Competent;
4. Proficient; and
5. Expert.

Within each of the stages of development there are performance progressions that describe a nurse’s thought process evolution. Table 3 describes the characteristics of each of Benner’s levels of proficiency and includes strategies you can employ to assess learners at each level.
**Table 3: Benner’s Model of Novice-to-Expert: Strategies for Assessment**

<table>
<thead>
<tr>
<th>Level of Proficiency</th>
<th>Characteristics</th>
<th>Strategies for Assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Novice</strong></td>
<td></td>
<td><strong>Educator</strong></td>
</tr>
<tr>
<td></td>
<td>- No experience with situations in which they are expected to perform</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Rigid adherence to taught rules or plans</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Little situational perception</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Unable to use discretionary judgment</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Focuses on pieces rather than the whole</td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>Learner</strong></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Prior to the learning event the educator will need to conduct a self-assessment of the learners’ knowledge of BPG. If they are novices, questions will be related to their general awareness or attitudes towards BPG.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- The educator will conduct an assessment of learner preferences taking into consideration learning styles (i.e., visual, auditory, kinesthetic).</td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>NOTE</strong></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- The situation is problematic when the educator is both a novice educator and a novice with BPG. In this situation, you should not be the primary instructor without a mentor or coach.</td>
<td></td>
</tr>
<tr>
<td><strong>Advanced Beginner</strong></td>
<td></td>
<td><strong>Educator</strong></td>
</tr>
<tr>
<td></td>
<td>- Guidelines for action based on attributes or aspects</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Situational perception still limited</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Can demonstrate marginally acceptable performance</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Notices change but cannot cope with it</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- All attributes and aspects are treated separately and given equal importance</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Needs help setting priorities</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Unable to see entirety of a new situation</td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>Learner</strong></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- When assessing advanced beginners, you may include questions about their knowledge of BPG and/or a specific BPG. The learner assessment should include questions about recommendations in the BPG (e.g., a pre-test prior to a workshop to determine knowledge of BPG in order to avoid re-teaching).</td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>NOTE</strong></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- The challenge is that rarely are all learners at the same level of competency. This challenge can also be an asset if you assess the learners in advance and construct the learning event so that more advanced learners can assess and help novice learners.</td>
<td></td>
</tr>
<tr>
<td>Level of Proficiency</td>
<td>Characteristics</td>
<td>Strategies for Assessment</td>
</tr>
<tr>
<td>----------------------</td>
<td>-----------------</td>
<td>--------------------------</td>
</tr>
</tbody>
</table>
| **Competent**        | - Aware of all the relevant aspects of a situation  
- Sees actions at least partly in terms of long-term goals  
- Conscious of deliberate planning  
- Can set priorities  
- Critical thinking skills are developing | **Educator**  
- Once you gain a level of competency with BPG, your assessment will extend to the transfer of knowledge from the classroom to the clinical setting.  
**Learner**  
- When assessing competent learners, a detailed assessment of their learning needs should be conducted to avoid re-teaching and to begin the process of application of BPG to the clinical environment. Learners can keep a log of their learning that will assist in identifying their needs. |
| **Proficient**       | - Sees situations holistically rather than in terms of aspects  
- Sees what is most important in a situation  
- Perceives deviations from the normal pattern  
- Decision-making less laboured  
- Uses guidelines and maxims for guidance | **Educator**  
- As you become more proficient with BPG, your assessment is more focused on the learner and how to maximize the learning of BPG in more complex clinical settings.  
**Learner**  
- Learners at this stage will spontaneously assess their learning needs and communicate these needs freely to the instructor. |
| **Expert**           | - No longer relies on rules, guidelines or maxims  
- Intuitive grasp of situations based on deep tacit understanding  
- Analytic approaches used only in novel situations or when problems occur  
- Vision of what is possible | **Educator**  
- As an expert educator of BPG you will act as a mentor for others teaching BPG and can actively assess the learning needs of novice educators.  
**Learner**  
- Expert learners will be totally self-directed and can take on teaching/mentoring roles and can assess the needs of novice learners (e.g., RNAO BPG Champions can assist the educator in the assessment of the BPG learning event). |

Assessing Learning Styles

Learners approach the tasks of learning in many different ways. There are a number of ways of identifying learner preferences for teaching/learning strategies, based on a variety of theoretical approaches. One that has proved useful for assessing learners is based on whether learners prefer seeing (visual), hearing (auditory) or doing (kinesthetic) (Rose, 1987). These ways of learning are not mutually exclusive; however, most learners will have a predominant learning style. Two learning style assessments (Accelerated Learning Assessment and Modality Preference Inventory) based on this approach are located in the Tips, Tools and Templates (p. 30-31).

Consideration of the learning style is necessary as this will influence teaching techniques. It is also important to note that individual teaching techniques have an impact on learner retention. The following pyramid (Figure 2) illustrates learner retention when teaching strategies address the three learning styles. The more active the learning, the better the retention.

![Figure 2: The Learning Pyramid](http://jwilson.coe.uga.edu/emt668/emt668.folders.f97/rhodes/LearningPyramid.html)

Assessing Motivational Factors

As well as addressing learning styles it is necessary to consider how motivational factors influence the learner. The learner may be motivated by a goal, the activity itself, or the desire to learn. Table 4 summarizes these motivations and the factors that contribute to the motivation. This will help you as an educator to understand the impact these motivations may have on learning, participation and retention. (For more information on learner qualities see Chapter 6: Enrichment Materials – Table 15, p. 99)
Table 4: Assessment of the Factors Motivating the Learner

<table>
<thead>
<tr>
<th>Learner Motivation</th>
<th>Motivational Factors</th>
<th>Assessment of the Learner</th>
</tr>
</thead>
<tbody>
<tr>
<td>Goal orientated</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
|                    | **External expectations** | • To comply with instructions from someone else  
|                    |                      | • To carry out the expectations of someone with formal authority  
|                    |                      | • To carry out the recommendation of some authority  |
|                    | **Professional advancement** | • To give me higher status in my job  
|                    |                      | • To secure professional advancement  
|                    |                      | • To keep up with the competition  |
| Activity orientated|                      |                           |
|                    | **Social Relationships** | • To fulfill the need for personal associations and friendships  
|                    |                      | • To meet new people and make new friends  |
|                    | **Escape/stimulation** | • To get relief from boredom  
|                    |                      | • To get a break from work  
|                    |                      | • To provide a contrast to the rest of my life  |
| Learning orientated|                      |                           |
|                    | **Cognitive interest** | • To learn for the sake of learning  
|                    |                      | • To seek knowledge for its own sake to satisfy an inquiring mind  |
|                    | **Social Welfare**    | • To improve my ability to serve mankind  
|                    |                      | • To prepare for service to my community  
|                    |                      | • To improve my ability to participate in community work  |

Be aware of the influence of formal authority on learners. If the learner respects the authority figure the response to learning will most likely be enthusiastic, but if the learner does not respect the authority figure there will most likely be resistance at least initially.

Learners who are motivated by advancement will be very competitive and dedicated to the learning, but once advancement is secured they could opt out of the learning.

Be aware that learners who value social relationships will want learning environments that promote dialogue, and that these learners can become a distraction to others when their social needs are not met.

Learners who attend to escape can initially be superficially engaged. But if they are under-stimulated and the learning environment is stimulating to them they can be converted to dedicated and enthusiastic learners.

Learners who crave knowledge can initially be very motivated and productive, but if their thirst for knowledge is not quenched, and they pull ahead of other learners, they can become bored and move on to other learning challenges. This group of learners would be described as dedicated to lifelong learning.

Learners of this type are the most altruistic of learners and will be dedicated to the learning and strive for higher knowledge.

---

**Step 4: Conduct a Learning Needs Assessment**

Now that you have an understanding of adult learning principles, Benner’s Model, learner styles and learner motivation, it is time to do a learning needs assessment to determine the learner’s level of knowledge of BPG. A Learner Needs Assessment is located in *Tips, Tools and Templates* at the end of this chapter (p. 32). Assessment of the learner is a continual process that takes place throughout the entire BPG learning event.
Based on the learner’s present level of knowledge of BPG and the level of knowledge desired, you can identify what should be achieved during and after the session. At the end of the learning event, you should assess the progress and future directions for both the learners and the learning event. A checklist for the assessment of the learning event can be found in *Tips, Tools and Templates* (p. 33).

**Step 5: Assess the Group**

Now that you have assessed individual learners, you will need to adapt your strategies to address the needs of a group of learners. The experiential makeup of the group is the key to successful planning, implementation and evaluation of an educational session. If your group is homogeneous in their level of proficiency and experience with BPG, then your strategies will be quite different from a group that has diverse proficiency and BPG experience.

**Key Points**

- An environmental assessment must be conducted prior to the BPG learning event (Please refer to the RNAO *Toolkit: Implementation of Clinical Practice Guidelines: Chapter 3 Assessing Your Environmental Readiness* p. 39-46).
- Assessment of the BPG learning event inclusive of the educator, learner and context is a continuous process that begins prior to the learning event (pre-assessment), continues during the event (ongoing assessment), and culminates at the conclusion of the event (evaluation).
- Educators have individual philosophies and styles of teaching that can be adapted to match the learner(s) styles and the context (setting) of the BPG learning event.
- Adult learners have varying levels of expertise, distinct learning styles, individual preferences, and internal and external motivators that need to be assessed to ensure a successful BPG learning event.
- Learning needs assessments can be conducted utilizing a variety of tools consistent with the needs of the BPG learning event, the educator and the learner in either an academic or clinical setting.
- Finally, a group assessment of the group of learners will allow the educator to tailor the strategies for planning the learning event.

Now you are ready to plan your learning event.
Academic Setting

Cynthia and her colleagues in the Faculty Workshop planning group conducted a formal needs assessment of all the faculty members to identify their current knowledge and understanding of the RNAO BPG. They adapted and used a survey that is located in the Tips, Tools and Templates at the end of this chapter (p. 29).

The Curriculum Committee also wanted to proceed with integrating the BPG into the educational curriculum. They discussed how faculty would assess students’ and preceptors’ learning needs when planning learning events for the students. Cynthia agreed to pilot the assessment strategies for her fourth year students taking Advanced Nursing Concepts. The fourth year students had previously taken an introductory course in research and had preliminary exposure to the principles of evidence-based practice. Cynthia used the Learner Needs Assessment located in Tips, Tools and Templates (p. 32) to assess the students’ knowledge. She found that a third of the students had heard of BPG but had not accessed them. Another third of the students had visited the RNAO website and browsed through some of the guidelines. Lastly, a third of the students had had clinical placements at one of the RNAO Best Practice Spotlight Organizations where they had experienced the implementation and evaluation of a number of BPG.

Cynthia also reflected on her own teaching style. In her previous year teaching the courses, she noted that her style was largely a lecture style with frequent questions and answers peppered through the session. She identified that she wanted to review how she taught the courses and develop new strategies (see Chapter 5: Academic Setting Scenario).

Lastly, Cynthia realized that the RNAO Toolkit: Implementing Clinical Practice Guidelines (RNAO, 2002) could provide guidance for implementing institutional change in the Faculty of Nursing. She found the chapter on environmental readiness assessment particularly helpful. She identified the barriers and facilitators for integrating best practice guidelines into her fourth year course.
Practice Setting

John prepared himself by assessing himself on his knowledge of BPG using the Educator’s Self-Assessment of BPG Knowledge located in *Tips, Tools and Templates* (p. 29). His assessment revealed that his knowledge of BPG in general and of DDD in particular needed upgrading. He began to increase his knowledge of BPG by reading some of the articles that were referenced in the Educator’s Resource. He also ordered hard copies of the two DDD BPG. He asked the librarian to retrieve a number of articles that were listed in the references of the DDD guidelines so he could read some of the original evidence sources. He also browsed through other guidelines that were provided on the CD included in the Educator’s Resource to help him upgrade his knowledge.

In assessing his own teaching style John discovered that he mainly uses a personal/facilitator style of teaching (coaching/mentoring) and asks for return demonstration in the clinical setting. He decides on three methods to evaluate himself (see Chapter 5: Practice Setting Scenario).

John’s assessment of the selected Resource Nurses as learners revealed that they:

- Are highly motivated;
- Have varying degrees of understanding and familiarity with BPG;
- Have strong clinical problem solving skills; and
- Have some experience in educational roles (i.e., as mentors and preceptors).

Bibliography

Educator’s Self-Assessment of BPG Knowledge

Consider the following statements. Do you agree with them? To what degree?
Do you feel confident in your familiarity with BPG?

For those who feel confident, you are ready to assess the learner.

For those who do not feel confident, there are resources to enhance your knowledge of BPG so that you will be able to incorporate them into your learning event.

CD1 (BPG, RNAO Toolkit), CD3 (Introduction to RNAO Best Practice Guidelines (PPT))

1. I am knowledgeable about BPG.

2. I include BPG in my teaching.

3. I can explain why RNAO BPG is beneficial for nursing in the academic and/or clinical setting.

4. I am able to incorporate BPG recommendations into my learning event.

5. If fully implemented, the BPG recommendations would make a significant change in the way nurses care for clients.
Learning Styles Assessment

1. Accelerated Learning Assessment
This chart helps you determine your learning style; read the word in the left column and then answer the questions in the successive three columns to see how you respond to each situation. Your answers may fall into all three columns, but one column will likely contain the most answers. The dominant column indicates your primary learning style.

<table>
<thead>
<tr>
<th>When you..</th>
<th>See (Visual)</th>
<th>Hear (Auditory)</th>
<th>Do (Kinesthetic)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spell</td>
<td>Do you try to see the word?</td>
<td>Do you sound out the word or use a phonetic approach?</td>
<td>Do you write the word down to find if it feels right?</td>
</tr>
<tr>
<td>Talk</td>
<td>Do you sparingly but dislike listening for too long? Do you favour words such as see, picture, and imagine?</td>
<td>Do you enjoy listening but are impatient to talk? Do you use words such as hear, tune, and think?</td>
<td>Do you gesture and use expressive movements? Do you use words such as feel, touch, and hold?</td>
</tr>
<tr>
<td>Concentrate</td>
<td>Do you become distracted by untidiness or movement?</td>
<td>Do you become distracted by sounds or noises?</td>
<td>Do you become distracted by activity around you?</td>
</tr>
<tr>
<td>Meet someone again</td>
<td>Do you forget names but remember faces or remember where you met?</td>
<td>Do you forget faces but remember names or remember what you talked about?</td>
<td>Do you remember best what you did together?</td>
</tr>
<tr>
<td>Contact people on business</td>
<td>Do you prefer direct, face-to-face, personal meetings?</td>
<td>Do you prefer the telephone?</td>
<td>Do you talk with them while walking or participating in an activity?</td>
</tr>
<tr>
<td>Read</td>
<td>Do you like descriptive scenes or pause to imagine the actions?</td>
<td>Do you enjoy dialogue and conversation or hear the characters talk?</td>
<td>Do you prefer action stories or are not a keen reader?</td>
</tr>
<tr>
<td>Do something new at work</td>
<td>Do you like to see demonstrations, diagrams, slides, or posters?</td>

<td>Do you ignore the directions and figure it out as you go along?</td>
<td></td>
</tr>
<tr>
<td>Need help with a computer application</td>
<td>Do you seek out pictures or diagrams?</td>
<td>Do you call the help desk, ask a neighbor, or growl at the computer?</td>
<td>Do you keep trying to do it or try it on another computer?</td>
</tr>
</tbody>
</table>

2. Modality Preference Inventory

Keep track of your score. Read each statement and select the appropriate number response as it applies to you. Often (3), Sometimes (2), Seldom/Never (1).

**Visual Modality**
- I remember information better if I write it down. ______
- Looking at the person helps keep me focused. ______
- I need a quiet place to get my work done. ______
- When I take a test, I can see the textbook page in my head. ______
- I need to write down directions, not just take them verbally. ______
- Music or background noise distracts my attention from the task at hand. ______
- I don't always get the meaning of a joke. ______
- I doodle and draw pictures on the margins of my notebook pages. ______
- I have trouble following lectures. ______
- I react very strongly to colours. ______

**Auditory Modality**
- My papers and notebooks always seem messy. ______
- When I read, I need to use my index finger to track my place on the line. ______
- I do not follow written directions well. ______
- If I hear something, I will remember it. ______
- Writing has always been difficult for me. ______
- I often misread words from the text (i.e., “them” for “then”). ______
- I would rather listen and learn than read and learn. ______
- I’m not very good at interpreting an individual’s body language. ______
- Pages with small print or poor quality copies are difficult for me to read. ______
- My eyes tire quickly, even though my vision checkup is always fine. ______

**Kinesthetic/Tactile Modality**
- I start a project before reading the directions. ______
- I hate to sit at a desk for long periods of time. ______
- I prefer first to see something done and then to do it myself. ______
- I use the trial and error approach to problem solving. ______
- I like to read my textbook while riding an exercise bike. ______
- I take frequent study breaks. ______
- I have a difficult time giving step-by-step instructions. ______
- I enjoy sports and do well at several different types of sports. ______
- I use my hands when describing things. ______
- I have to rewrite or type my class notes to reinforce the material. ______

Total the score for each section. A score of 21 points or more in a modality indicates a strength in that area. The highest of the 3 scores indicates the most efficient method of information intake. The second highest score indicates the modality which boosts the primary strength. For example, a score of 23 in the visual modality indicates a strong visual learner. Such a learner benefits from text, filmstrips, charts, graphs, etc. If the second highest score is auditory, then the individual would benefit from audiotapes, lectures, etc. If you are strong kinesthetically, then taking notes and rewriting class notes will reinforce information.

Learner Needs Assessment

Knowledge of RNAO BPG

1. I am aware of (indicate number) BPG.
   - [ ] 0
   - [ ] 1-3
   - [ ] 4-6
   - [ ] 7-9
   - [ ] 10 or more

2. I have read the recommendations of at least one BPG.
   - [ ] Yes
   - [ ] No

3. I learned about BPG from (indicate all that apply):
   - [ ] Clinical courses
   - [ ] Nursing Theory Courses
   - [ ] RNAO website
   - [ ] Clinical practice area where I work
   - [ ] Inservices/workshops
   - [ ] Colleagues
   - [ ] Other sources (please specify)

4. I believe that the quality of client care can improve through the implementation of BPG recommendations.
   - [ ] Yes
   - [ ] No

</tbody>
</table>
What is this chapter about?

In order to have a successful learning event, there must be a plan. The steps you will take to plan the learning event are:

1. Integrate BPG content into the curricula of an academic or practice setting;
2. Identify facilitators and driving forces to integration of BPG content;
3. Identify barriers to integrating BPG content and strategies to overcome them;
4. Identify partnerships for BPG education;
5. Facilitate the integration of BPG content into learning events;
6. Identify and allocate resources necessary for a successful learning event;
7. Plan for content;
8. Develop a learning plan; and
What is curriculum?
A curriculum is a framework that identifies what to include, exclude, the level of achievement, and the rationale for a learning event. It identifies the key approaches and concepts to include the sequencing of subject matter, teaching and evaluation strategies and their inter-relationships (Iwasiw, Goldenberg & Andrusyszyn, 2005).

What is Curriculum in an Academic Setting?
It is:
- Complex;
- Reflects the values and philosophy of the school; and
- Is approved through internal and external review processes.

What is Curriculum in a Practice Setting?
It is:
- Focused on client outcomes;
- Reflects the values, culture, and priorities of the organization; and
- Responds to identified needs and trends.

Step 1: Integrate BPG Content into the Curricula of an Academic or Practice Setting
The curriculum, whether in the academic setting or as the learning strategy for a practice setting, is the overall plan for the education of learners in the institution or program. BPG represent a small part of this greater whole. Consider how BPG fit into the larger picture and identify who needs to be involved to incorporate BPG throughout the program. Examine where BPG can be used as a theme or exemplar in existing courses or in-service plans. Identify how BPG fit the philosophy and values that underlie the existing curriculum and use this knowledge in planning to implement BPG. Once you know how BPG can be introduced into the program, you are ready to plan appropriate learning events.

Step 2: Identify Facilitators and Driving Forces for the Integration of BPG Content
When planning a learning event you will want to consider the factors that promote the introduction of BPG content. The following is a summary of some of the facilitators and driving forces that may influence the integration of BPG in any setting.

Identify from the following the facilitators and driving forces that are applicable to your setting:
- Accreditation expectations
  - Canadian Association of Schools of Nursing (CASN)
  - Canadian Council on Health Services Accreditation (CCHSA);
- Professional practice standards
  - College of Nurses of Ontario (CNO);
- Changes to entry practice requirements
  - Bridging theory-to-practice gap:
  - Increased awareness and appreciation of evidence-based practice (EBP);
  - Social accountability for quality outcomes; and
- Fiscal accountability for quality outcomes.

Once you have identified which factors apply to your setting, use them as an impetus for change. They may provide the external motivation necessary for learners who do not have internal motivation, as identified in Chapter 2.
Step 3: Identify Barriers to Integrating BPG Content and Strategies to Overcome Them

Now that you have considered the facilitators for change it is important that you also consider the barriers. Any change to the status quo may present challenges. Ritchie (Billings & Halstead, 2005) identified several factors attributable to faculty resistance to curricular changes. These factors may also hold true in the clinical setting. Table 5 outlines strategies to help overcome the common barriers to curriculum change.

Table 5: Barriers to Integration and Strategies to Overcome Them

<table>
<thead>
<tr>
<th>Barriers</th>
<th>Strategies to Overcome Barriers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fear of loss of control</td>
<td>Emphasize that BPG fit into the curriculum and practice and are not taking it over. BPG are only one example of EBP, not a comprehensive approach to curriculum.</td>
</tr>
<tr>
<td>Misunderstanding or confusion about new vocabulary and jargon, due to lack of information</td>
<td>Meet with educators or staff to review BPG, EBP and reassure them that BPG fit into their present approaches.</td>
</tr>
<tr>
<td>Perception of lack of skill to progress with new demands on time and energies</td>
<td>Many nurses discover that their practice already reflects BPG recommendations. Pointing this out may raise acceptance.</td>
</tr>
<tr>
<td>Differing views about what needs to be done</td>
<td>Meet to discuss common goals and strategies.</td>
</tr>
<tr>
<td>Lack of motivation to study the change</td>
<td>Appeal to values of high quality care, integration of research into teaching students and practice expectations.</td>
</tr>
<tr>
<td>Lack of perception of a need to change (if it’s not broken, don’t fix it)</td>
<td>Explore what is already in place, identify where changes are indicated.</td>
</tr>
<tr>
<td>Too many changes and too many demands related to the change process</td>
<td>Emphasize how BPG implementation fits into existing practice and changes already underway.</td>
</tr>
<tr>
<td>Adversarial relationship with leader</td>
<td>Develop coalitions at all levels to promote change from the bottom up, not top down. See RNAO Toolkit: Chapter 2 for stakeholder involvement.</td>
</tr>
<tr>
<td>Idea that “no one can tell me what to do”</td>
<td>Appeal to values of best possible care and evidence as basis of practice.</td>
</tr>
<tr>
<td>Threat to change current social support systems</td>
<td>Involve entire teams of educators or practitioners so that social support will be maintained.</td>
</tr>
<tr>
<td>Lack of resources</td>
<td>Mobilize resources before starting BPG implementation.</td>
</tr>
<tr>
<td>View that formal methods used to facilitate change are barriers rather than helps</td>
<td>Use informal as well as formal strategies within work teams and course groups.</td>
</tr>
<tr>
<td>Lack of rewards</td>
<td>Identify intrinsic and extrinsic methods to recognize exemplary practice and implementation of BPG.</td>
</tr>
</tbody>
</table>

Step 4: Identify Partnerships for BPG Education

Aside from being prepared to overcome any barriers that may occur, you can also seek support from other sources when introducing BPG into curricula. Nursing is a collaborative discipline that frequently relies on partnerships. Partnerships may involve collaboration with educational facilities, clinical facilities, other health disciplines and the community. Table 6 describes some possible partnerships that may assist in incorporating BPG into educational activities.

Table 6: Partnerships for BPG Education

<table>
<thead>
<tr>
<th>Partner</th>
<th>Description</th>
<th>Strategies to Promote Partnerships for BPG Education</th>
</tr>
</thead>
</table>
| Collaborative Educational Partners | College and university partners. Common goals for success of students agreed to by all partners. | ▶ All partners should agree to integration  
▶ BPG integration in individual courses must be discussed by curriculum committees to ensure consistency and lack of repetition.  
▶ Faculty workshops  
▶ Encourage faculty to become BPG Champions |
| Clinical Agencies              | A clinical partner where students are provided with an opportunity for placement. | ▶ Workshop for preceptors  
▶ Assess partners’ utilization of BPG in practice |
| Community Collaboration        | Establish, or work with existing advisory committee to discuss BPG in curriculum | ▶ Inform community agencies of the integration of BPG  
▶ Ask for community stakeholder support in clinical agencies |
| Interdisciplinary Collaboration | Physicians, all nursing staff, social workers, occupational and physical therapists, all unit staff | ▶ Workshops for all staff regarding plan for the adoption of BPG into unit practice.  
▶ Appeal to the value of EBP and the role of BPG in supporting all disciplines  
▶ Encourage staff to become BPG Champions |

Step 5: Facilitate the Integration of BPG Content into Learning Events

Now that you have planned for the learning event considering the facilitators, barriers and partnerships you are ready to consider the learners and their motivation. Hull, Romain, Alexander, Schaff, & Jones (2001) suggest a framework for facilitating curriculum revision using Lancaster’s (1985) six Cs of collaborative research. Table 7 demonstrates how these six Cs can be used to integrate BPG content into curriculum.
## Table 7: Curriculum Revision and its Relevance to BPG

<table>

</tbody>
</table>

## Integrating BPG into an Academic Setting

In the academic setting, as well as considering the motivation of the learners you also need to consider the type of course being taught. The integration of BPG throughout curricula will promote student acceptance of the philosophy and underlying BPG values as a natural part of their approach to nursing. These values include:

- Having an evidence base for practice;
- Integrating systematic reviews of evidence into recommendations for practice;
- Critical selection of appropriate recommendations for the client and the context; and
- Transferring knowledge to the real world of nursing care.

Strategies for the integration of BPG into undergraduate curricula are outlined in Table 8.
Table 8: Planning for BPG Integration into the Academic Setting

<table>
<thead>
<tr>
<th>Academic Course</th>
<th>Strategies for Integration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Research Courses</td>
<td>Use as exemplars of EBP or systematic reviews</td>
</tr>
<tr>
<td></td>
<td>Have students assess levels of evidence and critique</td>
</tr>
<tr>
<td></td>
<td>Have students recommend other topics for BPG development and provide rationale</td>
</tr>
<tr>
<td>Theory Courses</td>
<td>Analyze applicability of utilizing guideline in client’s care</td>
</tr>
<tr>
<td></td>
<td>Examples</td>
</tr>
<tr>
<td></td>
<td>First year students may concentrate on assessment</td>
</tr>
<tr>
<td></td>
<td>BPG on Therapeutic Relationships can enhance content in a Communications course</td>
</tr>
<tr>
<td></td>
<td>BPG on Supporting and Strengthening Families Through Expected and Unexpected Life Events can be highlighted in courses on family dynamics, child health, gerontology, or maternal/child care.</td>
</tr>
<tr>
<td>Clinical Courses</td>
<td>Assess the relevance of the recommendations of a BPG for a specific client or population in a clinical agency.</td>
</tr>
</tbody>

<tbody>
<tr>
<td>Staff with knowledge of BPG</td>
<td>Encourage staff with previous knowledge to become BPG Champions</td>
</tr>
<tr>
<td>Learned in basic education</td>
<td>Involve BPG Champions in establishing/running BPG workshops</td>
</tr>
<tr>
<td>In-service exposure</td>
<td>Have staff assess recommendations and decide how they can be implemented on their unit and identify how BPG fit in their scopes of practice. Nurses can work with unregulated care providers to identify how to integrate specific recommendations into the daily care of clients</td>
</tr>
<tr>
<td>Post graduate courses with BPG in curriculum</td>
<td>Encourage Post RN/graduate students to reflect on use of a BPG in their practice and share with staff.</td>
</tr>
<tr>
<td>Staff without previous BPG knowledge</td>
<td>Plan in-service education sessions to stimulate change in practice through implementation of a specific guideline or specific recommendations</td>
</tr>
<tr>
<td></td>
<td>Increase effectiveness by complementing in-service sessions with follow-up and integration of BPG in the workplace</td>
</tr>
</tbody>
</table>

Integrating BPG into a Practice Setting

In the practice setting, it is important for you to recognize that some nurses have learned about evidence-based practice (EBP) in their undergraduate education; however, they may not have had recent exposure to BPG. For others, basing their care on evidence may be a new concept. Implementing BPG recommendations may require that these nurses change their approach. Research by Estabrooks (1999) and Gerrish...
& Clayton (2004) have shown that EBP has not been key in the delivery of nursing care. Nurses rated knowledge of the client as an individual, and their own experience, more highly than research as the basis for decision making related to client care. Strategies to integrate BPG content into the practice setting will be different from approaches for the academic setting. Table 9 provides suggestions for the integration of BPG content when the learners may or may not have knowledge of BPG.

**Step 6: Identify and Allocate Resources Necessary for a Successful Learning Event**

The next step in planning involves identifying the resources needed for implementation. Among these resources are time, space, teaching/learning materials, expertise and finances. Table 10 provides a comparison between the academic and practice setting in terms of these five resources.

### Table 10: Resource Considerations

<table>
<thead>
<tr>
<th>RESOURCE</th>
<th><strong>Academic Setting</strong></th>
<th><strong>Practice Setting</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Time</strong></td>
<td>How much time is needed in each course for students to master BPG content?</td>
<td>How available are learners – can they be released for one hour, for a half day, for a whole day?</td>
</tr>
<tr>
<td></td>
<td>Can BPG be used as exemplars with material already included?</td>
<td>Can the group contract to make time available?</td>
</tr>
<tr>
<td></td>
<td>Is there educator time available for leveling and planning?</td>
<td>Are repeat sessions required? How will you deal with shift work and continuity?</td>
</tr>
<tr>
<td><strong>Space</strong></td>
<td>Is the room assigned for a course suitable for small group work?</td>
<td>Do you have time for planning?</td>
</tr>
<tr>
<td></td>
<td>If needed, can other space be booked?</td>
<td>Experiential learning takes more time than lectures – can you build in that time?</td>
</tr>
<tr>
<td><strong>Materials</strong></td>
<td>What is needed? e.g., projector, screen, computer, video, printed BPG, handouts, etc. Are they available, or do they need to be developed?</td>
<td>What is possible within the space – e.g. is projection equipment available?</td>
</tr>
<tr>
<td></td>
<td>What can be provided for those who cannot attend?</td>
<td>What expertise is needed – e.g., content, facilitation, implementation?</td>
</tr>
<tr>
<td><strong>Expertise</strong></td>
<td>What expertise is needed – e.g., content, facilitation, implementation?</td>
<td>What expertise is available?</td>
</tr>
<tr>
<td><strong>Finances</strong></td>
<td>All the above imply a need for finances.</td>
<td>Will financing be needed for staff time, materials, room rental, honoraria for experts and refreshments?</td>
</tr>
<tr>
<td></td>
<td>Will honoraria be required?</td>
<td>Is there a budget?</td>
</tr>
<tr>
<td></td>
<td>Will materials have to be purchased for the school?</td>
<td>What are actual and “in-kind” budget requirements? Who can provide funding needed?</td>
</tr>
<tr>
<td></td>
<td>Will students have to purchase materials?</td>
<td>Is there a budget?</td>
</tr>
<tr>
<td></td>
<td>Is there a budget?</td>
<td>What can be provided for those who cannot attend?</td>
</tr>
</tbody>
</table>
Step 7: Plan for Content

Now that you have planned for the context of the learning event, including the resources needed, you are ready to plan for the content. When planning for the content of the learning event you need to consider: the learner characteristics, the desired endpoint, the context of the learning event and the BPG content. *Figure 3* is a visual representation of these factors. Each of these factors will help to identify the level of the content. *Chapter 6: Enrichment Materials (Table 18)* contains questions to consider within each of the four factors in order to determine the content of the learning event (p. 102).

![Figure 3: Factors to consider in choosing appropriate content levels](image)

**Learner Characteristics**

Learners vary in their level of knowledge and experience. Benner’s Model of Novice-to-Expert (*Chapter 2*) can be especially helpful in classifying the level of the learners. When planning the content of the learning event it is important to consider the following:

- Experience of the learner with BPG;
- Educational level of the learner (year in a nursing program, or years of nursing experience);
- Professional mix of the learner group (RN, RPN, PSW, MD, allied health staff); and
- Homogeneity of the group (whether learners are alike or different).
Chapter 6: Enrichment Materials (Table 19) contains strategies for planning based on the level of the learner (p. 104).

**Desired Endpoint**
In planning your content you need to identify “where you want to go”. The desired endpoint may be expressed as a goal, an outcome, an end-in-view, an objective or a competency. For those interested in writing learning objectives, a detailed discussion of Bloom’s (1956) taxonomy and tips for writing objectives is included in Chapter 6: Enrichment Materials (p. 103). In addition, you will also find a tool (Table 21) that combines Benner and Bloom’s work to help you identify and define endpoints for different levels of learners (p. 110).

**Learning Event Context**
The context of the learning event will vary depending on the environment in which the content is being taught. When planning the content it is important to consider:
- Sequencing: where does the content fit in the larger scheme? Is it an introductory or senior level course in a program or have the staff had previous education sessions on this BPG or other BPG?
- Thread and exemplars (models, concepts, examples):
  - Has a BPG been presented previously?
  - What is the motivation for presenting the BPG?
    - To improve practice?
    - To promote EBP?
  - Is this BPG going to be utilized in several courses as a thread throughout the program or as an exemplar in one learning event?

**BPG Content**
A BPG can be taught at varying levels of complexity. When planning the complexity of the content it is important to consider:
- The relevance of the specific BPG to the learners;
- The relevance of the recommendations within the BPG to the learners and their clients;
- The level of influence learners have on administration to promote implementation of recommendations;
- The theoretical models that may assist in the learning of BPG content; and
- The references or other resources required to augment learning.
Step 8: Develop a Learning Plan

A comprehensive plan, including the key elements of a learning event, is applicable in both academic and practice settings.

Key elements of a learning plan include:
- Topic;
- Resources required;
- Goals of the learning event;
- Activities to be completed by learners prior to event;
- Content to be covered;
- Post-event assignments;
- Teaching methods and required resources;
- Contingency plans for untoward events;
- Evaluation methods; and
- Changes to implement with the next learning event.

A Learning Plan Template can be found in Tips, Tools and Templates (p. 51).

Step 9: Plan for Contingencies

Planning for untoward events will allow you to recover if they do happen. This may be as simple as having an alternate method of presentation, knowing how to have a locked door unlocked, having an alternate/additional date/time for the event, and knowing who to contact in the event of technical problems.

Key Points
- Curriculum is an overall plan for a program into which BPG learning events must fit.
- Planning the learning event involves assessment of the facilitators that can help create an impetus for change and allow integration of BPG.
- Barriers to change and integration need to be considered and strategies put in place to overcome them.
- Taking advantage of partnerships can be key to integration while at the same time allow creative use of resources. Partners can:
  - Provide expert experience to novice educators;
  - Support dissemination through collaborative teaching; and
  - Encourage evidence-based practice.
- Integration must be planned in relation to present content and context, experience and motivation.
- Possible disruptions require a contingency plan.

Now you are ready to implement your plan.
**Academic Setting**

Cynthia’s goal was to have the fourth year students begin to use BPG in assignments and practice. The students had all taken a research course that emphasized evidence-based practice and the assessment of research. In addition, all the students had done surgical clinical rotations. Although she wanted her students to be aware of the range (breadth) of BPG available, she also wanted them to have the experience of using one in depth.

Cynthia wanted to provide background for her students on the use of RNAO BPG as a form of evidence-based practice. She decided to use a variety of teaching strategies in order to encourage self-directed learning. The outcomes of the learning activity included that students would:

- Identify the appropriate BPG for a particular client; and
- Identify which recommendation(s) in the specific BPG would meet the client’s needs.

To keep herself organized with the various planning tasks, Cynthia used the *Learning Event Checklist* located in *Tips, Tools and Templates* (p. 52). Cynthia also used the following learning plan for her class. A blank template is located in *Tips, Tools and Templates* (p. 51).
## Learning Plan Template

### Topic
- Evidence-based Practice/Nursing Best Practice Guidelines
  - Introducing BPG into Care Using “Assessment and Management of Pain” BPG

### Learning Objectives
1. Be able to identify BPG appropriate for their clinical placement
2. Choose recommendations relevant to their practice using “Pain” BPG
3. Incorporate BPG recommendations into care plans and reflect on utility of recommendations for care of a specific patient

### Activities to be completed by the learner prior to the learning event
1. Go to RNAO BPG website
2. Download recommendations from “Assessment and Management of Pain” and bring to class
3. Review evidence-based practice (EBP)

### Content to be reviewed during the learning event
- Mini introduction to BPG - CD2 Making it Happen and CD3 - PPT
- Development and components of BPG
- Links of BPG to EBP and standards
- Recommendations for practice and relevance for students

### Post event assignment
- Paper on use of BPG in practice

### Teaching methodology and resources required
- Mini lecture
- Group with students possessing various levels of BPG experience in each group
- Group reports and discussion of strategies for implementation
- Resources: CD Player, data projector, space for small group work

### Evaluation methods
- Grading of assignments
- Exam question on BPG utilization
- Group reports
Practice Setting

John knows that prior to the workshop he must write a learning plan that includes development of workshop objectives. He determines that at the end of the workshop, desired endpoints will be that the Resource Nurses will:

1. Understand their role as Resource Nurses;
2. Outline the general concepts of BPG;
3. Outline the specific content of the DDD BPG that apply to their individual units;
4. Identify driving forces and barriers to implementing the DDD BPG on their units;
5. Develop strategies to overcome the barriers; and
6. Develop plans for educating and supporting the staff on their units.

Once John has established the learning outcomes, he completes the Learning Event Checklist located in Tips, Tools and Templates (p. 52).

John has considered other partnerships for this project and is aware of Professor Cynthia’s expertise in BPG and the care of the elderly. Her consolidation students are placed on the target units and two of their preceptors are Resource Nurses. He decides he would like to partner with Cynthia for education and follow up. He plans to invite her as a guest speaker to the workshop and suggests she work with him in the evaluation of both staff and students’ use of BPG.

In addition to the workshop, John plans to have follow-up sessions for the Resource Nurses. These sessions will be held once a month for one hour. The meetings will focus on: Resource Nurse activities; helpful tips; barriers faced; and group suggestions for strategies to overcome barriers. The following is John’s learning plan.
Learning Plan Template

**Topic**

*Train the Trainer event for implementing “Screening for Delirium, Dementia & Depression in Older Adults”*

**Learning Objectives**

1. Explain the role of the Resource Nurse
2. Discuss evidence-based practice & its use through BPG
3. Identify key phases of BPG development & dissemination
4. Discuss the major components of DDD project
5. Prioritize recommendations suitable for environment
6. Identify driving forces and barriers for BPG use on units
7. Develop strategies for introducing BPG with staff

**Activities to be completed by the learner prior to the learning event**

1. Review BPG content available on the RNAO website
2. Distribute DDD BPG to participants prior to workshop

**Post event assignment**

John will observe experiences with BPG implementation and use the monthly meetings with the Resource Nurse to report on, update and share experiences

**Teaching methodology and resources required**

- PowerPoint presentation, discussion, handouts, survey
- Resources: laptop, projector, PowerPoint program and presentation file, copies of RNAO BPG, handouts (PowerPoint slides/surveys/evaluation forms)

**Evaluation methods**

**Level 1**
- End of workshop questionnaire

**Level 2**
- Workshop discussion and development of strategies

**Level 3**
- Monthly follow-up and survey of staff three months post-implementation, based on instrument provided by Cynthia

Learning Event Checklist

Areas of consideration that must be addressed for each event:

Assessment
- Topic identified
- Learners identified
- Self-assessment (educator)
- Environment assessed (i.e. readiness and timing)
- Resources required (i.e., time, space, materials, expertise, and budget)

Planning
- Goals, objectives and key deliverables identified
- Appropriate strategies chosen (i.e., matching of learners, content and context)
- Lesson plan developed
- Evaluation strategies determined
- Logistics arranged (i.e., space, equipment, catering, registration)
- Communication strategy (i.e., marketing, negotiation, promotions)
- Actual event scheduled
- Participant availability established (staff and students)

Implementation
- Back up plan in place!
- Problems anticipated ahead of time

Evaluation
- Evaluation plan implemented
- Evaluation results collated
- Evaluation results communicated to relevant stakeholders
- Revisions to be incorporated into next learning event.

Implementing Teaching/Learning Strategies

CHAPTER 4

What is this chapter about?
In order to have a successful learning event, you must use teaching and learning strategies. The steps you will take to implement the learning plan are:

1. Choose teaching/learning strategies; and
2. Implement teaching/learning plan.

Step 1: Choose Teaching/Learning Strategies
When considering a teaching/learning strategy there are three key categories from which to choose: teacher-centred, interactive, or independent strategies. Within each of these categories, there are techniques that can be employed depending on the learning event and the learning environment (Figure 4). Following Figure 4 you will find a more detailed discussion that outlines the main concepts of these categories. Where indicated, further detail can be found in Chapter 6: Enrichment Materials.
**Teacher-Centered Strategies** put the educator at the centre of the learning event. This is the conventional way of teaching. Examples include:

- Lecture;
- Questioning;
- Discussion; and
- Group Work.

**Interactive Strategies** involve two or more people working together to achieve the learning objectives and outcomes.

- **Problem Solving** involves either the educator or learner identifying and solving a problem. Learning takes place through the process of solving the problem. Activities may include:
  - Questioning
  - Discussion
  - Group work

"The expert tutor does not direct solutions to a problem, but rather prompts critical thinking amongst the study group members" (Price & Price, 2000, p. 257).
Collaborative Learning

Dialogical Learning involves two people learning together through various means including:
- Discussion
- Collaborative Learning
- Case Study
- Field Study
- Laboratory
- Simulations/Games
- Mentoring & Coaching

Experiential Learning involves people learning through acting out real life situations in either a simulated environment or an actual practice setting.
- Case Study
- Field Work
- Mentoring & Coaching
- Role Play
- Laboratory
- Programmed Instruction
- Modularized Instruction

Independent Strategies involve the individual learner creating the learning event or the interaction material alone.
- Modularized Instruction
- Independent Learning
- Reflective journals

Step 2: Implement Teaching/Learning Plan
As an educator you should incorporate the learning styles that were introduced in Chapter 2 (visual, auditory, kinesthetic) into the learning event. It is important to adapt your teaching strategies and techniques to maximize the experience for each learner. McDonald & Nadash (2003) also suggest the incorporation of active learning strategies to promote best practice uptake.

Table 11 provides you with learning tips that help to address the three learning styles (visual, auditory and kinesthetic).
### Table 11: Learning Tips for Individual Learning Styles

<table>
<thead>
<tr>
<th>Learning Style</th>
<th>Learning Tips</th>
</tr>
</thead>
</table>
| See (Visual)   | Use graphics to help learning: books, films, pictures, puzzles, videos, computer software  
|                | Use colour coding to organize content  
|                | Write directions  
|                | Use flow charts and diagrams for note taking  
|                | Visualize words and facts to be retained  |
| Hear (Auditory)| Use audio tapes, films, records, videos, radio programs  
|                | Participate in debates, seminars, group assignments  
|                | Learn by reciting, discussing, interviewing, attending lectures  
|                | Ask for oral explanations  |
| Feel (Kinesthetic)| Memorize, drill, make decisions while walking or exercising  
|                 | Use concrete materials: models, lab equipment, subject-related games and puzzles, computer programs  
|                 | Take frequent breaks in study periods  
|                 | Learn by touching and doing  
|                 | Study by writing over and over  |

*Table 12 takes each of the strategies from Figure 4 and lists techniques that address the three learning styles.*

**Key Points**

- A variety of teaching strategies and techniques should be used in order to meet the different learning styles of the learners.
- By assessing individual learning styles the educator can identify the predominant style and choose strategies and techniques that best fit the style.
- Retention rates vary based on the learning style and the teaching strategy used. Groups are not necessarily homogeneous in their style or retention rate. It is therefore essential to use a combination of strategies when implementing a learning plan in order to maximize the learning experience for the group and for the individual.

Now you are ready to evaluate the learning event.
**Academic Setting**

Having read *Chapter 4*, Cynthia has identified four main teaching/learning strategies to use with her fourth-year students.

First, Cynthia showed the RNAO video, *Making it Happen (CD2)*, which provided an introduction to the best practice guidelines. Second, she had the students form small groups to discuss their thoughts and questions raised by the video. Third, Cynthia provided them with a list of RNAO BPG obtained from [www.rnao.org/bestpractices](http://www.rnao.org/bestpractices) and gave each student an example of case studies located in the *Tips, Tools and Templates* (p. 67-70). She then had the students choose the most appropriate BPG and most appropriate recommendation(s) in the BPG for the client in the case study. She also asked the students to provide rationale for their choices. She plans to bring the groups together in a plenary session to discuss their recommendations and rationale for the case study. Fourth, Cynthia had the students prepare a written assignment.

**Assignment**

Write a paper of not more than four pages describing one of your client’s experiences with pain and identify which recommendations from *Assessment and Management of Pain* (RNAO, 2002) would be appropriate for this client. What strategies would you employ to ensure consistent application of these recommendations and explain your rationale for selection. How would you evaluate the effectiveness of these interventions?
Practice Setting

John and the steering committee meet to plan the workshop. Cynthia agrees to work with John to deliver the workshop and to conduct the subsequent evaluation with staff and students. During the planning phase, John keeps in mind that there are three types of learners: visual, auditory and kinesthetic.

John and the committee members decide on a highly interactive one-day workshop using a variety of teaching strategies to address the various types of learning styles:

1. Independent learning through pre-circulated materials and a survey to identify staff challenges in working with patients with dementia, delirium or depression;
2. Small group discussion using case studies; and
3. Multi-media such as PowerPoint and videos.

Monthly, John will meet with the Resource Nurses to identify area-specific facilitators and barriers, successful strategies and problem-solving techniques.

Educator's Resource: Integration of Best Practice Guidelines
Case Study 1 – Year 1
Source: Lakehead University, Thunder Bay, Ontario. Reprinted with permission.

Mrs. K. is a 78-year-old widow, living in a seniors’ apartment building. She has a longstanding history of osteoporosis and osteoarthritis. Currently she is taking Celebrex® 100mg daily. Recently her daughter has noticed a change in her usual fastidious housekeeping and attention to her personal care. When questioned by her daughter, Mrs. K. states she is having increased pain with daily tasks and increased fatigue as her sleep is interrupted by the pain.

1. You are the nurse in her health care team. What other information do you need in order to advocate with her physician for increased pain control?
2. What constitutes a comprehensive pain assessment? What will help you to validate your assessment?

Dr. P. has prescribed Tylenol® #3 1-2 tabs. Q4h prn, and will see Mrs. K. in the office in 3 weeks time to evaluate treatment efficacy. On your next visit Mrs. K. reports that as long as she takes her Tylenol® every 4 hrs. the pain is much improved and she is able to accomplish some tasks. However, the homemaker reports bruising to both knees and Mrs. K. states she hasn’t had a bowel movement for four days and is falling asleep in the afternoon while watching her favourite shows on T.V.

3. What documentation is necessary in the reassessment process? What information needs to be included in the care plan in order to achieve positive outcomes for Mrs. K.?
4. What action is the appropriate next step in managing Mrs. K’s pain?
5. What other disciplines should be involved at this point? What non-pharmacological intervention could be considered in her management?
Dakota is a 2-year-old Native Canadian child whose mother has brought him to the nurse with a 3 day history of fever, cough and runny nose. He has been irritable, and not eating, although he has been drinking from his bottle.

1. What is the appropriate tool to use in assessing this child? Who else is necessary to include in gathering information regarding this child and what questions would you ask?

2. What physical assessments should be made to facilitate care planning for this child?

3. What should be included in the care plan with regard to pain management for Dakota?

Tylenol® is prescribed.

4. What physical finding determines the type of analgesic and the dose? What education is necessary for the mother? How will you facilitate information sharing to ensure understanding?

5. What comfort measures would you discuss with the Mom?

How would you evaluate the efficacy of your care plan for this child?
Case Study 3 – Year 3
Source: Lakehead University, Thunder Bay, Ontario. Reprinted with permission.

Mr. B. is a 43-year-old, previously healthy male who presents in emergency with a 2 day history of abdominal pain and vomiting. Investigations reveal an abdominal mass requiring immediate surgical intervention. The surgeon has indicated that the mass is likely malignant, but definite pathology is not yet available. Mr. B. returns from the operating room with a colostomy and a nasogastric (NG) tube. His wife is very anxious, asking questions about diagnosis, treatment plans and how long he will be off work.

1 Who would you include in the treatment plan?
2 After three days it is clear his pain is escalating. He is receiving IV Demerol® and the nurses are questioning why he would require more medication. What questions would you ask him in assessing his pain? What would be a more appropriate pain medication at this point in his recovery?

The doctor changes Mr. B.’s analgesic to regular IV morphine. He is more comfortable and tolerating sips of fluids and his NG tube is removed that night. Two days later his morphine is changed to oral and his wife expresses a concern about the amount of morphine he is still taking and the fact that he is sleeping so much of the time. His colostomy has not been active for three days and he is experiencing increased nausea.

3 How would you address the wife’s concerns and the patient’s changing symptoms?
4 With a few minor adjustments to his medication he is comfortable and more alert but he is increasingly anxious about the pending pathology report and its implications. What adjustment to his careplan would be appropriate at this time?
5 What non-pharmaceutical interventions might be considered and what other disciplines may now need to be involved?

What resources would you access to support the patient/family and staff around concerns re: colostomy care, supplies and future treatments at home?
Case Study 4 – Year 4
Source: Lakehead University, Thunder Bay, Ontario. Reprinted with permission.

Mr. J. is a 65-year-old, mildly cognitively impaired diabetic gentleman, with renal impairment, living in Cedar Crest Manor, a nursing home. On the night shift he is found wandering the halls shouting and striking out at the nurse as she tries to direct him back to his room. Mr. J. is usually very mild mannered and compliant.

1 What might be the cause of his sudden change in behaviour? What investigations should initially be considered?

He has been on antibiotics for five days and his behaviour has stabilized but he now is reluctant to return to his previous levels of activity, refusing to wear anything except his comfortable slippers. Family have requested a re-evaluation of his condition as he appears more uncomfortable and has a decreased appetite.

2 What other information do you require from the family and Mr. J.? What diagnostic tools are available to assist you in gathering that information?

3 On examination his feet are cool to touch and hypersensitive and he states they burn when you touch them. What possible condition explains these symptoms? What treatment options are available?

4 His physician starts him on Duragesic® 25 mcg q3 days. What implications does this have for his careplanning?

Staff express concerns around knowledge about the Duragesic® patch and its appropriateness for use in the nursing home, as there is no present policy regarding the patch. What are the next steps to consider in this scenario? What resources are available to implement change and support staff with these concerns?

What is the chapter about?
To determine the success of the learning event, there must be an evaluation. The steps you will take to evaluate the learning event are:

1. Review your goal, outcome, endpoint, objective or competency ("Have you arrived?");
2. Evaluate the process of the learning event including an evaluation of the educator and the event itself;
3. Evaluate the learner; and
4. Review the results and implement the desired changes.

Evaluation strategies need to be incorporated throughout assessment, planning and implementation of the learning event. By engaging in ongoing evaluation you will be able to determine if the strategies you chose from the previous chapters have been successful in achieving the objectives of the learning event.

Two questions that need to be addressed are:
- How will I know the learning event has been successful?
- How will I know learning has occurred?
Organizational outcomes will not be covered in this chapter. For strategies to evaluate the outcomes of implementing specific BPG, please refer to the RNAO Toolkit: Implementation of Clinical Practice Guidelines; Chapter 5: Evaluating your success.

**Step 1: Review your Endpoint**

In Chapter 2 you established the goal of your learning event by answering the question “where do you want to go?” The evaluation strategies you employ need to be structured to determine whether or not your goals have been met.

**Step 2: Evaluate the Learning Event**

Evaluation of the learning event involves evaluation of the:

- Educator
- Event

**Educator Evaluation**

There are several methods used to evaluate the educator. These include:

- evaluation by the learners at the end of the learning event;
- self-evaluation; and
- peer evaluation.

**Evaluation by the Learner**

Learners should always be invited to provide feedback on the teaching strategies employed during the learning event. This information can be obtained through end-of-workshop evaluation forms or end-of-course evaluations. See Tips, Tools, and Templates for Learner Evaluation of the Educator (End-of-course Evaluation) (p. 83).

**Educator Self-Evaluation**

You should perform a self-evaluation of your teaching strategies at the end of all learning events. The main question to ask is, “Did the strategies I used help me obtain my desired endpoint?”

Examples of self-evaluation questions for educators may include:

1. Am I teaching and modeling skills of evidence-based practice?
2. Did my teaching strategies help to integrate BPG into curriculum/educational programs and experiences?
3. Have I clearly identified and communicated the desired “outcomes” of learning?
4. Can I “see” the effects of the teaching strategies on my learners (short-term, mid-term, and long-term)?
5. Do I routinely evaluate the effectiveness of my teaching strategies?
6. What have I learned from the experience?
7. What successful elements will I incorporate into future learning events?
8. What will I do differently next time?
A Self-Assessment for the Educator is located in Tips, Tools and Templates (p. 81).

Peer Evaluation
Finally, a peer evaluation can provide the educator with objective feedback. Invite a peer to sit in on your educational event and provide you with feedback. See Tips, Tools, and Templates for a Peer Assessment of the Educator (p. 82).

Evaluation of the Learning Event
There are several levels of evaluation strategies that can be employed to evaluate the learning event. In order to select the most appropriate strategy you need to know what you want to measure. When evaluating the event, you can choose to evaluate the content, and/or the teaching strategies.

Originally devised for use in the training and development field, Kirkpatrick’s (1994) model consists of four levels of evaluation. Table 13 provides a description of each of Kirkpatrick’s levels and also includes “intangible areas” for evaluation. Specific strategies for each level are also provided.

Table 13: Levels of Evaluation and Strategies for Measurement

<table>
<thead>

</tr>
<tr>
<td></td>
<td></td>
<td>• Follow-up surveys of the learning event (usually at 3, 6, and 12 months post)</td>
</tr>
</tbody>
</table>
**Step 3: Evaluate the Learner**

When evaluating learners, you can evaluate their knowledge, skills and attitudes. These can be achieved through three methods: evaluation by the educator, self-evaluation, and/or peer evaluation.

**Evaluation by the Educator**

Educator evaluation of the performance of the learner is based on the desired outcomes identified through prior assessment of the learners (Chapter 2) and the goal, outcome, end-in-view, objective or competency identified for the learning event (Chapter 3). You can evaluate performance through written testing (knowledge) or direct observation of skills and/or behaviours indicating attitudes.

**Evaluation of Performance**

Performance is an outcome of learning whether cognitive, behavioural or attitudinal. The desired outcomes need to be identified prior to implementing the learning event. Rubrics are guidelines for rating learner performance. They specify the expected outcomes for the level of the learner (i.e., novice to expert). See Tips, Tools, and Templates for templates of rubrics that evaluate written assignments and performance. (p. 86-87).

*Chapter 6: Enrichment Materials* contains the following for evaluating the outcomes of learning:

- Reflective journal scoring guideline (*Table 23, p. 116*)
Evaluation of desired competencies (*Table 24*, p. 117)  
Rubric for grading of written work (*Table 25*, p. 118)  
Rubric for grading performance specific skills (*Table 26*, p. 118)

### Self-Evaluation

Learners should perform a self-evaluation of their knowledge of BPG at the end of the learning event. The main question learners should ask themselves is “Did this learning event help me achieve my personal learning goal?”

Examples of self-assessment questions specific to BPG may include:

1. Was this BPG learning event applicable to the clients in my practice?  
2. Am I using evidence-based practice?  
3. Did this learning event help to integrate BPG into my client care?  
4. Did I achieve the desired outcomes of the learning event?  
5. What have I learned from the experience?  
6. What was successful that I will incorporate into my future practice?  
7. What are the gaps in my knowledge, skills and attitudes as they relate to BPG?

See *Tips, Tools, and Templates for a Self-Assessment for the Learner* (p. 84).

### Peer Feedback

Finally, a peer evaluation can provide the learner with objective feedback. Invite fellow learners to observe each other in order to provide you with feedback. See *Tips, Tools, and Templates for a Peer Assessment of the Learner* (p. 85).

### Step 4: Review and Implementation of Evaluation

Now that you have completed the first three steps, it is time to review the results of your implementation. These results will determine the level of change the educator must make to subsequent learning events to achieve even greater success.

### Key Points

- Evaluation is an ongoing part of the learning event and must be considered from the outset.  
- Evaluation measures outcomes to determine the impact of the learning event.  
- Evaluation can lead you through a cyclical process of information gathering and bring you back to where you first began!
Academic Setting

Cynthia conducted a self-evaluation at the beginning of the year. She used the L.E.A.R.N. guide (p. 71) for self-reflection and made the decision on how she would make adjustments to the teaching style that she normally used. Cynthia used both informal responses from students and formal feedback from the year-end course evaluations (p. 83) to determine how the students had responded to her new strategies. She added several questions to the standardized School of Nursing evaluation in order to obtain feedback on the BPG component of the course.

To evaluate students, Cynthia used a combination of assignments and exam questions. She used the sample Rubric for Grading Written Work/Assignments provided in Tips, Tools and Templates (p. 86) to develop a marking scheme for the fourth-year student BPG assignments.

Cynthia’s overall goal was to integrate best practice guidelines into the curriculum at the School of Nursing. She felt confident that valuable progress had occurred during the first year based on her interaction with colleagues and the feedback she received. She noted an increased number of emails, phone calls and informal conversations with her colleagues who had questions or comments concerning the integration of the guidelines.
Practicing Setting

John planned for three types of evaluation: self-assessment as the educator, peer evaluation from Cynthia and learner evaluation of the workshop. (p. 81, 82, 83).

John also used three methods to evaluate the Resource Nurses. Self-assessment, peer evaluation, and educator evaluation were used following the workshop. (p. 84, 85, 86-87). These tools would also be used during the monthly follow-up meetings for ongoing evaluation of the Resource Nurses and their effectiveness based on their new knowledge.

As planned, John and Cynthia will also be conducting a formal evaluation of the learning event and preparing a research proposal to study changes in staff behaviour and patient outcomes.

Educator's Resource: Integration of Best Practice Guidelines
What is this chapter about?

In order to have a successful learning event, you may want to use the additional information contained in this chapter. It will allow you to augment the knowledge you have gained throughout the previous chapters which contain the “need-to-know” material for planning a learning event. This chapter contains “nice-to-know” content to give you more background information and skills. It contains additional information on the following:

1. The Nursing Best Practice Program;
2. Assessing your learners;
3. Planning your strategies;
4. Implementing your plan; and
5. Evaluating your learning event.
Achievements
In early 2000, RNAO commenced the first cycle of guideline development, pilot testing, evaluation and dissemination. Since its early months, the program has gained tremendous momentum with several cycles now underway. In its early months, the RNAO also committed to ensure that the best practice guidelines were kept up to date and to formally review and revise the best practice guidelines, if necessary, every three years.

To date, dozens of best practice guidelines have been developed along with health education fact sheets and toolkits/resources for best practice guideline implementation in practice and in nursing education. A comprehensive and updated list of the latest documents and resources can be found on the RNAO website at www.rnao.org/bestpractices. Many of the best practice guidelines and resources are also available in French.

Additionally, the best practice guidelines have been piloted in over 40 health care settings in Ontario and in over a dozen nursing education programs. A comprehensive, multi-dimensional dissemination, uptake, and implementation plan has been put in place to ensure the best practice guidelines and related resources are actively used in health care.

Nursing Best Practice Guidelines Program
This section contains additional information about the Nursing Best Practice Guidelines Program. The following topics are discussed:

- Government funding
- Key areas of priority
- Organizational structure
- What are Best Practice Guidelines
- Standards of Practice and Evidence-Based Practice
- Types of evidence use for BPG recommendations
- Dissemination
- Best Practice Champions Network

Government Funding
In 1998, the Ontario Minister of Health and Long-Term Care, Elizabeth Witmer, established a Nursing Task Force to address a broad range of issues related to the nursing profession. One of the task force’s key recommendations was the development of clinical practice guidelines as a means of ensuring quality care for the public. In 1999, Minister Witmer announced multi-year funding, allocated to the RNAO for the development, pilot implementation, evaluation and dissemination of nursing best practice guidelines. In November of 1999, the Nursing Best Practice Guidelines Program was launched starting with several focus groups to further the conceptual and operational direction of the program, as well as to identify priority areas.

Key Areas of Priority
Through several focus groups with key stakeholders, five key areas of priority were identified. These priorities have provided a framework to identify specific clinical topics for best practice guideline development. These five areas are:

1. Gerontology
2. Primary Health Care
3. Mental Health
4. Home Care
5. Emergency

Organizational Structure of the Nursing Best Practice Guideline Program
The organization of the Nursing Best Practice Guideline Program reflects the various functions/mandates of the program. The program has a core staff that direct and coordinate activities and report to the RNAO Executive Director and provide regular reports to the Government of Ontario. The program is structured in a manner that engages a broad spectrum of stakeholders: patients/families; nurses; health care providers;
Best Practice Guidelines

Best practice guidelines are systematically developed statements based on best available evidence to assist nurses, other health care providers and patients make decisions about patient care. Important points for learners include:

a **Systematic development.** Each best practice guideline is developed using rigorous methods including:
- Literature review, particularly systematic reviews and meta-analyses, along with other general reviews. Literature is critically appraised using defined criteria.
- Recommendations are developed based on research evidence and, where research evidence is not available, through expert opinion and consensus.
- All draft best practice guidelines undergo an extensive review by a diverse range of stakeholders including patients and their families, advocacy groups as well as multidisciplinary health care providers, managers and policy decision makers.

b **Best available evidence.** Although proponents of evidence-based practice strongly advocate for randomized control trials (RCT) as the gold standard for evidence, there are many areas of patient care that are neither amendable nor appropriate for RCT research design and such research is not available. The notion of strong evidence only coming from the quantitative tradition of research is increasingly challenged. A debate on broadening the definition and nature of evidence to include other forms of evidence such as evidence from qualitative studies, patient experience, clinician expertise, etc., has informed the choice of evidence for BPG.

At present, the RNAO BPG Program uses the levels of evidence detailed in the margin, noting that international work is underway to establish a more inclusive system of evidence.

c **BPG as decision tools.** BPG should be thought of as decision-making tools within the context of patient preferences, wishes, ethics and feasibility. The recommendations should not be used blindly or in a “cookbook” fashion.

Levels of Evidence

I\textsuperscript{a} Evidence obtained from meta-analysis or systematic review of randomized controlled trials.

I\textsuperscript{b} Evidence obtained from at least one randomized controlled trial.

II\textsuperscript{a} Evidence obtained from at least one well-designed controlled study without randomization.

II\textsuperscript{b} Evidence obtained from at least one other type of well-designed quasi-experimental study, without randomization.

III Evidence obtained from well-designed non-experimental descriptive studies, such as comparative studies, correlation studies and case studies.

IV Evidence obtained from expert committee reports or opinions and/or clinical experiences of respected authorities.
BPG, Standards of Practice and Evidence-Based Practice

The College of Nurses of Ontario (CNO), the nursing regulating body, has a number of mandatory practice standards that define the professional expectations for all Ontario nurses, which apply in a variety of practice settings and situations.

RNAO BPG are congruent with the practice standards and provide the best available knowledge for practice. These are based on optimal care and therefore may not necessarily be mandatory standards. Therefore, there may be an overlap between standards and BPG. The distinction should be made that BPG provide recommendations, not obligations.

In Ontario, RNAO and CNO have collaborated to ensure that where there is overlap or connection between standards and BPG, these are made apparent to nurses. For example, in newly developed BPG, related standards are cross-referenced. Also, on the RNAO and CNO websites, standards and BPG are cross-referenced. For example, the RNAO BPG Prevention of Falls and Falls Injuries in the Older Adult is cross-referenced with a related standard in the CNO guide to the use of restraints. The scope of the guideline is broader but does contain recommendations on least restraints, which are then discussed in the CNO guide in greater detail. Similarly, the RNAO BPG Client Centred Care is linked to CNO standards on “ethical framework”, “guide to consent” and “guide to nurses providing culturally sensitive care”.

BPG are one strategy in moving towards an evidence-based practice environment. Evidence-based practice is “a set of tools and resources for finding and applying current best evidence from research for the care of individual patients” (Haynes, 2004, p. 232). Although individual clinicians can conduct their own literature searches, appraisal and application of best evidence for clinical decision making, it is unlikely that all practitioners will be able to do so at all times in all practice situations. It is also impractical to expect that individuals will have the skill and necessary time and resources to find, appraise and apply best evidence on their own. Therefore, guidelines provide a means of accessing pre-appraised evidence and recommendations on appropriate ways of applying the evidence in practice. Additionally, guideline development panels use their clinical experience and expertise as well as feedback from a broad spectrum of stakeholders to weigh the evidence and make appropriate recommendations for practice, for the context and for skill requirement.
How Best Practice Guidelines are Developed and Kept Current

Numerous BPG have been published, along with patient education materials referred to as Health Education Fact Sheets. Many of the guidelines and all of the Health Education Fact Sheets are published in French. All materials can be found on, and ordered online, from the RNAO website at www.rnao.org/bestpractices (CD1).

Typically, a BPG is a hard copy or web-based document that contains the following:

- Purpose and scope of the guideline
- Guideline development process
- Definition of terms
- Description of levels of evidence
- Background information on the topic area
- Summary of recommendations
- Detailed list of recommendations with associated discussion of evidence. All material is appropriately referenced. Three types of recommendations are provided:
  - Practice recommendations: statements of best practice directed at the practice of health care professionals that are evidence-based.
  - Educational recommendations: statements of educational requirements and educational approaches/strategies for the introduction, implementation and sustainability of the best practice guideline.
  - Organization & policy recommendations: statements of conditions required for a practice setting that enable the successful implementation of the best practice guideline. The conditions for success are largely the responsibility of the organization, although they may have implications for policy at a broader government or societal level.
- Indicators and measures that can be used for evaluation
- Strategies for implementing the guideline
- References and bibliography
- Other resource information such as assessment tools, detailed information on specific recommendations such as medications, referral information for patients, etc.

All BPG are formally reviewed every three years by an expert panel. The panel reviews the evidence available since the original BPG was published. Revisions are made as necessary, validated as required by stakeholders and re-published. Where revisions are minor, an addendum accompanying the original BPG is published. The review and revision process is described in the reviewed/revised BPG document.
Types of Evidence Used to Develop the Recommendations

The RNAO Nursing Best Practice Guidelines Program uses a broad range of both quantitative and qualitative research evidence appropriate for the relevant clinical questions for the specific topic of the BPG. In addition, the development panel members consider experiential and clinical expertise in the development of recommendations, validation of the research findings, and discussion of the recommendations in the various local contexts, specifically, as they relate to various health care sectors such as acute care, long term care, community, etc. Lastly, stakeholder feedback, evidence from a broad spectrum of health care providers, managers, policy makers, and most importantly, patients and their families, is systematically solicited, discussed and incorporated into the final BPG recommendations.

Each BPG is also scrutinized to ensure it has contextual relevance. At times, the evidence may suggest a particular recommendation but the environment does not make it feasible for the recommendation to be implemented. Therefore, the BPG development panel must consider the context when making recommendations. It is important for readers to ensure they read the “discussion of evidence” to understand the nature of the evidence used to derive a particular recommendation.

BPG Dissemination, Knowledge Transfer/Uptake and Evaluation

Various resources are available to the educator for promoting BPG as well as keeping up to date with BPG related knowledge. Other tools and resources can be used to enhance the educator’s networks.

- **Website** [www.rnao.org/bestpractices](http://www.rnao.org/bestpractices). All BPG and related material are available for free download from the RNAO website. The BPG come in two formats: summary of recommendations and the complete guideline.
- **CD with all published BPG.** Each year, a CD containing PDF files of all currently published BPG (English and French), all Health Education Fact Sheets, and the *Toolkit* is released. A CD is available with this binder (CD1).
- **BPG Newsletter.** Published three times a year, anyone can subscribe to these free newsletters on the website. A copy of the latest newsletter is available with this binder.
- **A 28-minute video: Making it Happen.** This is available to help orient staff and students to the Nursing Best Practice Guidelines Program. This can be ordered on the website, and is available in CD and DVD formats. A copy is included with this binder.
Best Practice Champions Network. Nurses in all sectors, including nursing schools, can join the Champions Network. BPG Champions commit to a two-year period to assist in promoting, influencing and implementing guidelines. An initial two-day workshop is provided to all Champions followed by regular support through teleconferences, symposiums, newsletters, and other supports by RNAO. A staff Champions Coordinator provides the necessary support along with a network of over 500 other Champions across the province of Ontario. A more detailed description follows at the end of this section.

International Conference. A two-day conference is held every other year (odd years) in Toronto, Ontario.

Best Practice Summer Institute. An annual one-week long institute held in Ontario to develop in-depth capacity in evidence-based practice, guideline implementation, and change management.

Advanced Clinical/Practice Fellowships for Best Practice Guideline Implementation. This fellowship provides funding for nurses to conduct a 12-week mentored learning experience to develop personal and organizational capacity for guideline implementation.

RNAO Doctoral Fellowships. Offered to one candidate annually, this fellowship is an initiative in partnership with the Government of Ontario to develop research capacity in the evaluation of health outcomes, and where feasible, financial and system outcomes associated with implementation of BPG.

RNAO. Conducts presentations, workshops, and writes for various publications in order to spread the knowledge packaged in the BPG. In 2004, RNAO held 20 full day BPG workshops across Canada and over 1000 nurses participated in these sessions. These workshops were funded by Health Canada. Organizations wishing to hold customized workshops in their organizations are requested to contact the RNAO to discuss details.

Web-based Learning. Resources available on the RNAO website include a self-paced e-learning module on critical appraisal of research publications and a self-paced e-learning program based on a best practice guideline on smoking cessation, titled Helping People Stop Smoking. Additionally, a workshop entitled Diabetes Foot: Risk Assessment Education Program has been designed. A facilitator’s guide and participant’s package, plus images on slides are all available for free download on the website.

New Product Development. Knowledge uptake is continuously occurring and announced through various means and usually available on the website.
Best Practice Spotlight Organization Initiative. A long-term partnership between RNAO and selected organizations to plan, implement and evaluate multiple guidelines in one organization. Lessons learned from these projects are disseminated broadly.

Best Practice Education Demonstration Projects. These are projects undertaken in partnership between RNAO and selected faculties of nursing to integrate and evaluate best practice guidelines into nursing educational curriculum. Lessons learned from these projects are disseminated broadly.

Evaluation tools. Various BPG evaluation tools have been developed and are available as published monographs on the website.

Best Practice Champions Network

The Best Practice Champions Network is an initiative of the RNAO that prepares nurses to take active roles in promoting, influencing, supporting and implementing best practice guidelines in their practices throughout Ontario. The Network was launched in Toronto in June 2002 with an overwhelming response from the nursing community. The aim of the Network is to provide a means of sharing successes and challenges, requesting assistance, and continuous learning on dissemination and implementation of BPG. Best Practice Champions are nurses and others who are passionate about improving nursing practice and client care in their organization. Champions can be anyone who will be able to have organizational and/or unit/program level influence. The Champions can take many different roles such as bringing awareness of best practices to their organization, influencing groups and committees to consider these best practices, mobilizing, coordinating and facilitating the training and development of professional staff in BPG implementation, etc. Moreover, they can provide ongoing resource support for bridging the gap between evidence and practice with strategies to implement specific BPG. For detailed information on how to get involved, see the RNAO website at www.rnao.org/bestpractices.

In order to create a critical mass of committed individuals towards BPG within an organization, one approach might be to identify and engage select individuals in the Best Practice Champions Network. This group could attend the orientation workshop together and subsequently create their own support group within their organization to plan and implement strategies to influence uptake of BPG in their organization. An organizational approach to establishing champions can provide leverage, support and momentum. Examples of activities conducted by already established Best Practice Champions in Ontario include:
Presenting at the professional practice committee to get buy-in from others.

Developing an organization-wide communications plan, including raising awareness of BPG through booths, posters, contests, intraweb, newsletters, etc.

Establishing an organizational BPG steering committee to spearhead the identification and implementation of BPG in the organization.

Networking and sharing ideas and resources with other Best Practice Champions outside of the organization by holding open house sessions, drop-in site visits, teleconference sessions, or by email and phone.

**Assessing your Learners**

This section contains additional information about the assessment for the learning event. The following topics are discussed:

- Adult learning principles and how to assess the learner;
- Learner qualities in the clinical setting; and
- Developmental phases of learning.

**Adult Learning Principles**

According to Knowles (1984) and Knox (1986) there are characteristics that distinguish adults from children in regards to their learning. Table 14 contains suggestions of how to assess learners of BPG according to the principles of adult learning.
Table 14: Adult Learning Principles: Assessment of the Learner

<table>
<thead>
<tr>
<th>Adult Learning Principles</th>
<th>Assessment of the Learner</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adults must want to learn</td>
<td>Assess motivational factors affecting your learners (e.g., goal-orientated, activity-oriented, learning orientated)</td>
</tr>
<tr>
<td>Adults will learn only what they feel they need to learn</td>
<td>Assess the BPG content that the learner wants to learn. Have them distinguish between &quot;need-to-know&quot; and &quot;nice-to-know&quot;</td>
</tr>
<tr>
<td>Adults learn by comparing past experiences with new experiences</td>
<td>Assess the learner’s previous exposure to BPG and how learning was best facilitated in the past. Ask them for examples of how they have applied BPG in their past work experiences</td>
</tr>
<tr>
<td>Adults need immediate feedback concerning their progress</td>
<td>During your initial assessment ask your learner the type, mode and frequency of feedback they wish to receive</td>
</tr>
<tr>
<td>Adults want their learning to be practical</td>
<td>Have your learners identify the demands and problems in their current work setting that relate to BPG, and ask them to identify situations in which they feel BPG would be helpful</td>
</tr>
<tr>
<td>Adults try to avoid failure</td>
<td>Have your learners identify the methods for in-class participation and evaluation to avoid putting individuals on the spot.</td>
</tr>
<tr>
<td>Adults do not all learn the same way</td>
<td>Assess the individual learning styles of your learners by asking them to describe how they best learn</td>
</tr>
</tbody>
</table>

Learner Qualities

The knowledge, skills and attitudes of the learner will also have an impact on the success of the learning event. Educators, therefore, need to be aware of specific qualities of the learner and adapt their educational strategies appropriately. Table 15 outlines some of the qualities the educator should assess prior to choosing and implementing teaching strategies.

Developmental Phases of Learning

In addition to assessing learners on the basis of adult learning principles and learner characteristics, educators of adult learners can also consider the developmental phases of learners when they are preparing the learning event.

Perry’s Scheme of Intellectual Development

Perry (1968), working with male university students, suggested that they move through a series of fairly well-defined phases of cognitive development that he described as coherent interpretive frameworks for giving meaning to educational experiences. Perry’s scheme of intellectual development is described in Table 16 (p. 100).
# Table 15: Qualities of Learners

<table>
<thead>
<tr>
<th>Qualities for BPG Learners</th>
<th>Assessment of Learners</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1 Excellent patient care</strong></td>
<td>Commitment to excellent patient care is central to becoming an practitioner who uses BPG. Practitioners who continually strive for excellence will want to understand their patients’ problems thoroughly and apply BPG appropriately to all aspects of care.</td>
</tr>
<tr>
<td><strong>2 Excellent Clinical Skills</strong></td>
<td>Excellent clinical skills in patient interviewing and physical examination are needed for practitioners to accurately understand the clinical problem, the patient’s unique situation and values, and the BPG recommendations related to the identified problem. Excellent communication skills are essential so that practitioners can clearly explain to patients and learners the risks and benefits of the available options and BPG recommendations.</td>
</tr>
<tr>
<td><strong>3 Excellent Clinical Judgment</strong></td>
<td>Excellent clinical judgment is of paramount importance because it enables practitioners to weigh the risks and benefits of the available BPG in light of the patient’s values and preferences. Time and experience are essential elements to developing clinical judgment. Expert learners will be expected to have a highly developed level of clinical judgment, whereas this quality will grow in early learners.</td>
</tr>
<tr>
<td><strong>4 Diligence</strong></td>
<td>Learners of BPG must be consistently willing to work hard and to apply the recommendations to clinical practice situations, taking into consideration the context and the complexity of clinical situations. Diligence is needed to communicate and hone the other essential skills of interviewing, physical examination, clinical reasoning and judgment.</td>
</tr>
<tr>
<td><strong>5 Perspective</strong></td>
<td>An ability on the part of the learner to view newly appraised BPG appropriately within the context of health care and feasibility.</td>
</tr>
</tbody>
</table>

## Women’s Ways of Knowing

Since the vast majority of nurses are women, nurse educators should be aware of the developmental stages women experience so as to meet them as they are. Educators who are aware of different levels of achieving meaning can help learners by taking a connected knowledge approach, seeking to understand the perspective of the learner and how that perspective was reached. The researchers claim these ways of knowing, although gender related, are not gender specific, and while these ways of knowing are commonly held by women they are also accessible to men.

<tr>
<td>NOTE</td>
<td>Novice BPG learners tend to be in this phase and will apply BPG recommendations in a mechanized and routine manner</td>
</tr>
<tr>
<td>Phase 2</td>
<td></td>
</tr>
<tr>
<td>Multiplicity</td>
<td>▶ Multiple perspectives are acknowledged</td>
</tr>
<tr>
<td></td>
<td>▶ Authorities are not always right, they just have different opinions</td>
</tr>
<tr>
<td></td>
<td>▶ Knowledge is simply a matter of opinion</td>
</tr>
<tr>
<td></td>
<td>▶ Beginning to seek rationale for opinions</td>
</tr>
<tr>
<td></td>
<td>▶ Lacking in ability to evaluate opinions</td>
</tr>
<tr>
<td>Phase 3</td>
<td></td>
</tr>
<tr>
<td>Relativism</td>
<td>▶ Learn to weigh evidence and distinguish between weak and strong support</td>
</tr>
<tr>
<td></td>
<td>▶ Authorities are neither defied nor resisted</td>
</tr>
<tr>
<td></td>
<td>▶ Capacity for seeing the ‘big picture’</td>
</tr>
<tr>
<td></td>
<td>▶ Can evaluate ideas</td>
</tr>
<tr>
<td></td>
<td>▶ Beginning to synthesize ideas</td>
</tr>
<tr>
<td>Phase 4</td>
<td></td>
</tr>
<tr>
<td>Commitment in Relativism</td>
<td>▶ Recognize they must make choices and commitments</td>
</tr>
<tr>
<td></td>
<td>▶ Authorities are consulted,</td>
</tr>
<tr>
<td></td>
<td>▶ Can transfer understandings of complexities and diverse perspectives ranging from academic pursuits to the creation of a personal worldview</td>
</tr>
<tr>
<td>NOTE</td>
<td>Expert BPG learners tend to be in this phase and will be able to adapt BPG recommendations to the context of complex situations</td>
</tr>
</tbody>
</table>

Belenky, Clinchy, Goldberger, & Tarule (1996) identified a series of stages that women experience in coming to full participation in knowledge development. The five epistemological perspectives by which women know and view the world were identified as follows:

1. Silence;
2. Received knowing;
3. Subjective knowing;
4. Procedural knowing including two different types of procedures, called ‘separate knowing’ and ‘connected knowing’ and
5. Constructed knowledge.

Educators who are aware of women’s different ways of knowing can help learners by taking a connected knowledge approach and seeking to understand the perspective of the learner and how that perspective was reached. Learners who have not yet reached the stage of constructed knowing may need help in recognizing that BPG recommendations do not dictate actions and different situations require different approaches.
to care. Table 17 is based on the five epistemological perspectives by which women know and view the world.

Table 17: Women’s Ways of Knowing

<table>
<thead>
<tr>
<th>Perspective</th>
<th>Characteristics</th>
<th>Relevance for BPG Educators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Silence</td>
<td>In silence women experience themselves as mindless and voiceless, and subject to the whim of authority.</td>
<td>This person may be a very passive participant, perceives themselves as oppressed by society and the organization and will either resent attempts to be engaged or just ask for the “recipe” or “cookbook” for implementing BPG.</td>
</tr>
<tr>
<td>Received Knowing</td>
<td>The learner sees herself as capable of receiving and reproducing knowledge from external authorities, but these women do see themselves as being able to construct or create knowledge themselves.</td>
<td>This person will be capable of appreciating that BPG are based on expert knowledge from external authorities, but may apply the BPG in a routine manner, neglecting the context and the complexity of situations, and be hesitant to apply critical thinking skills to adapting BPG.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>She may also have difficulty understanding that there may be conflicting views held by authorities and be frustrated by ambiguity.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>&quot;Received knowers&quot; are listeners and tend towards conformist thinking. They encourage authorities to speak and act for them.</td>
</tr>
<tr>
<td>Subjective knowing</td>
<td>From this perspective, truth and knowledge are conceived as personal and private and subjectively known or intuited.</td>
<td>This person may also be passive/introverted and may be less enthusiastic about guidelines, feeling that the time honored ways of doing things are the best and reject BPG in favour of traditional practices and intuitive knowing.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>She will also tend to listen and observe and may be more receptive to experiential learning through reflection.</td>
</tr>
<tr>
<td>Procedural knowing</td>
<td>Procedural knowledge is present where women are invested in learning. Two types of procedural knowledge are reported:</td>
<td>This person may follow BPG guidelines in a very matter-of-fact manner.</td>
</tr>
<tr>
<td></td>
<td>▶ “separate knowing”, distinguished by evaluation and objectivity in judging another’s point of view; and,</td>
<td>Those for whom procedural knowledge is ‘separate knowing’ will not accept BPG as fact and will doubt the credibility of the guidelines.</td>
</tr>
<tr>
<td></td>
<td>▶ “connected knowing”, distinguished by acceptance and appreciation of another’s point of view.</td>
<td>Those for whom procedural knowledge is “connected knowing” will immerse themselves in exploring BPG through the experiential knowledge of themselves and others and will be open and receptive to incongruencies and ambiguities and the creation of new ideas.</td>
</tr>
<tr>
<td>Constructed knowing</td>
<td>From this position, women view all knowledge as contextual, and they experience themselves as creators of knowledge and place value on both subjective and objective strategies for knowing.</td>
<td>This person will be passionately involved in the learning process and embrace BPG as an opportunity to explore new ways of thinking, feeling and acting and will engage in dialogue with others by listening, asking questions, argumentation, hypothesizing and sharing ideas.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Reciprocity and cooperation are prominent.</td>
</tr>

Four Factors to Consider for Planning the Learning Event

A BPG can be taught at varying levels of complexity. Four key factors introduced in Chapter 3 should be considered when deciding the level of content to be included in a learning event:

1. The learner characteristics;
2. The desired endpoint;
3. The context of the learning event; and
4. The BPG content, including the parts to be emphasized and the complexity of the emphasis.

Table 18 outlines the questions to be asked for each of these factors to assist the educator in determining the level of the content.

When considering learner characteristics, it is important to plan for varying levels of experience. Table 19 provides a more detailed description of the “Learner Characteristics”. Figure 3 in Chapter 3 (p. 42) gives factors to consider in planning for various learner levels of proficiency.

Bloom’s Taxonomy and Learning Objectives

When planning a learning event you will want to define the endpoint for the learners. You may also want to define the endpoint as a learning objective.

Learning objectives reflect outcomes and provide guidance to educators and learners. Learning objectives are also referred to as behavioural objectives, instructional objectives, and performance objectives. The main purpose is to assist the learner in gaining the most from the learning event. The term learning objective is defined as: “statements to assist and guide the learner toward achieving the desired outcome(s) of the learning event” (Morrison, Ross & Kemp, 2001).

Morrison, Ross & Kemp (2001) described the threefold purpose of learning objectives:

1. To assist the educator in selecting and organizing appropriate instruction and resources aimed at facilitating effective learning events.
2. To provide the educator with a framework for planning and formulating methods to evaluate student learning events.
3. To guide the learner in identifying the skills and knowledge required for mastery of the material covered in the learning event.
Table 19: Learner Characteristics: Benner’s Model Novice-to-Expert

<table>
<thead>
<tr>
<th>Level of Proficiency</th>
<th>Characteristics</th>
<th>Strategies for Planning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Novice in relationship to</td>
<td>▶ No experience with situations in which they are expected to perform&lt;br▶ Rigid adherence to taught rules or plans&lt;br▶ Little situational perception&lt;br▶ Unable to use discretionary judgment&lt;br▶ Focuses on pieces rather than whole</td>
<td>▶ Plan to provide structure, lead learners through specific BPG&lt;br▶ Proceed from simple to complex&lt;br▶ Use case studies, lab experiences and other concrete opportunities to apply skills and build confidence&lt;br▶ Group novices with experts so that they can learn from them, but recognize that experts can become frustrated with novice learners because intuitive thinkers may not be unable to break down BPG learning into concrete steps</td>
</tr>
<tr>
<td>Advanced Beginner</td>
<td>▶ Guidelines for action based on attributes or aspects&lt;br▶ Situational perception still limited&lt;br▶ Can demonstrate marginally acceptable performance&lt;br▶ Notices change but cannot cope with it&lt;br▶ All attributes and aspects are treated separately and given equal importance&lt;br▶ Needs help setting priorities&lt;br▶ Unable to see entirety of a new situation</td>
<td>▶ Plan for structured and well organized learning opportunities that build on prior learning experiences. Help them to begin to integrate BPG into their practice&lt;br▶ Provide opportunities for dialogue with competent and proficient clinicians to demonstrate using BPG to assist with problem solving and priority setting&lt;br▶ For positive learning to occur, plan opportunities for support and reinforcement in the learning session</td>
</tr>
<tr>
<td>Competent</td>
<td>▶ Now aware of all the relevant aspects of a situation&lt;br▶ Sees actions at least partly in terms of long-term goals&lt;br▶ Conscious of deliberate planning&lt;br▶ Can set priorities&lt;br▶ Critical thinking skills are developing</td>
<td>▶ Plan for less structure and more self-directed learning opportunities to allow building on recognized capability to choose learning needs&lt;br▶ Provide access to a preceptor/mentor who has expertise to assist in development of critical thinking skills related to the BPG</td>
</tr>
<tr>
<td>Proficient</td>
<td>▶ Sees situations holistically rather than in terms of aspects&lt;br▶ Sees what is most important in a situation&lt;br▶ Perceives deviations from the normal pattern&lt;br▶ Decision-making less laboured&lt;br▶ Uses guidelines and maxims for guidance</td>
<td>▶ Plan self directed activities to explore diverse situations and share their knowledge with clinicians, especially as teachers of BPG to more novice clinicians&lt;br▶ Have these nurses work with and guide novices and advanced beginners in workshop exercises and in reinforcing BPG use in practice&lt;br▶ Expand critical thinking and decision-making skills by arranging opportunities for dialogue with experts on complex situations regarding BPG</td>
</tr>
<tr>
<td>Expert</td>
<td>▶ No longer relies on rules, guidelines or maxims&lt;br▶ Intuitive grasp of situations based on deep tacit understanding&lt;br▶ Analytic approaches used only in novel situations or when problems occur&lt;br▶ Vision of what is possible</td>
<td>▶ May be bored with traditional lecture methods that are focused on the learning needs of novices and beginners&lt;br▶ Recognize expertise by involving in planning&lt;br▶ Allow for total self-direction in their learning and encourage generating hypotheses and questions about integration of BPG and adaptation to context&lt;br▶ Recognize expertise by having them act as teacher, group leader, or mentor for competent and proficient clinicians&lt;br▶ Consult on BPG education and implementation</td>
</tr>
</tbody>
</table>
In order to develop learning objectives it is essential to focus on the learner. A key tool for identifying and leveling learning objectives is Bloom's taxonomy. Benjamin Bloom & David Krathwohl (1956) devised taxonomy of learning behaviours to identify levels of learning within three domains: Cognitive, Affective and Psychomotor.

**The Cognitive Domain**
Educational activities and behaviours identified in this domain relate specifically to intellectual competence. Bloom and colleagues identified different levels of intellectual competence using a hierarchy of six categories: Knowledge, Comprehension, Application, Analysis, Synthesis, and Evaluation. Each of the categories has been defined and language terms assigned to assist educators and students in identifying the level of intellectual competence to be achieved (Bloom & Krathwohl, 1956; Anderson & Krathwohl, 2001). This language is helpful in the process of developing and leveling learning objectives. *Table 20a* describes the elements of this domain.

**The Affective Domain**
Educational activities and behaviours identified in this domain relate specifically to an awareness of feelings, emotions and ways of thinking. This domain includes interest, attention, concern, responsibility, communication skills and the ability to demonstrate these characteristics in the context of situations relative to the area of study, in this case BPG. This domain has not been categorized; however, language terms have been assigned to assist educators and students in identifying achievement of behaviours specified in this domain. *Table 20b* describes the affective domain.

**The Psychomotor Domain**
This domain was not identified in Bloom's original work, but has been defined and classified in works other than Bloom's. For the purposes of this resource, it will be defined as educational activities and behaviours specific to the use of motor skills. *Table 20c* describes the elements of the psychomotor domain.

</table>
**Table 20b: Affective Domain**

(feelings, attitudes)

**Knowledge**
- **Definition:** Selective attention to stimuli

**Sample verbs**
- Accept
- Acknowledge
- Be aware
- Listen
- Notice
- Pay attention
- Tolerate

**Comprehension**
- **Definition:** Responds to stimuli

**Sample verbs**
- Agrees to
- Answer freely
- Assist
- Care for
- Communicate
- Comply
- Conform
- Consent
- Contribute
- Cooperate
- Follow
- Obey
- Participate willingly
- Read voluntarily
- Respond
- Visit
- Volunteer

**Application**
- **Definition:** Attaches value or worth to something

**Sample verbs**
- Adopt
- Assume responsibility
- Behave according to
- Choose
- Commit
- Desire
- Exhibit loyalty
- Express
- Initiate
- Prefer
- Seek
- Show concern
- Show continual desire to
- Use resources to

**Analysis**
- **Definition:** Conceptualizes the value and resolves conflict between it and other values

**Sample verbs**
- Adapt
- Adjust
- Arrange
- Balance
- Classify
- Conceptualize
- Formulate
- Group
- Organize
- Rank
- Theorize

**Synthesis**
- **Definition:** Integrates the value into a value system that controls behaviour

**Sample verbs**
- Act upon
- Advocate
- Defend
- Exemplify
- Influence
- Justify behaviour
- Maintain
- Serve
- Support

### Table 20c: Psychomotor Domain

**Organization**
- Definition: Creates new patterns for specific situations
- Sample verbs:
  - Designs
  - Originates
  - Combines
  - Composes
  - Constructs

**Adaption**
- Definition: Adapts skill sets to meet a problem situation
- Sample verbs:
  - Adapts
  - Reorganizes
  - Alters
  - Revises
  - Changes

**Complete Overt Response**
- Definition: Performs automatically
- Sample verbs:
  - Act habitually
  - Advance with assurance
  - Control
  - Direct
  - Excel
  - Guide
  - Maintain efficiency
  - Manage
  - Master
  - Organize
  - Perfect
  - Perform automatically
  - Proceed

**Guided Response**
- Definition: Imitates and practices skills, often in discrete sets
- Sample verbs:
  - Copy
  - Duplicate
  - Imitate
  - Manipulate under supervision
  - Practice
  - Repeat
  - Try

**Mechanism**
- Definition: Performs acts with increasing efficiency, confidence, and proficiency
- Sample verbs:
  - Complete with confidence
  - Conduct
  - Demonstrate
  - Execute
  - Improve efficiency
  - Increase speed
  - Make
  - Pace
  - Produce
  - Show dexterity

**Set**
- Definition: Is mentally, emotionally and physically ready to act
- Sample verbs:
  - Achieve a posture
  - Assume a body stance
  - Establish a body position
  - Place hands, arms, etc.
  - Position the body
  - Sit
  - Stand
  - Station

**Perception**
- Definition: Senses cues that guide motor activity
- Sample verbs:
  - Detect
  - Hear
  - Listen
  - Observe
  - Perceive
  - Recognize
  - See
  - Sense
  - Smell
  - Taste
  - View
  - Watch

**Knowledge Set**
- Definition: Is mentally, emotionally and physically ready to act
- Sample verbs:
  - Achieve a posture
  - Assume a body stance
  - Establish a body position
  - Place hands, arms, etc.
  - Position the body
  - Sit
  - Stand
  - Station

Writing Learning Objectives

Objectives begin with the identification of a topic and are refined as the learning process evolves. Content can be grouped and defined by specific goals related to the learning event. In essence, what will the student accomplish through participation in this learning event? A learning objective can then be formulated for each of the goals. Learning objectives are formatted after identifying the essential content of the learning event. Learning objectives must be written in the active voice and contain the condition, the behaviour and the criterion (Mager, 1984).

The Condition

This portion of the learning objective is specific to the situation under which the student will achieve the behaviour. An example: “At the completion of this learning event the student will...”

The Behaviour

This portion of the learning objective is specific to what the student will demonstrate. The behaviour is usually expressed in the form of a verb; this verb must define an observable or measurable student action. It is helpful to use Bloom’s language terms for this portion of the learning objective. Two examples are:

1. “The student will describe the purpose of BPG” (Bloom’s Cognitive Domain: Comprehension); and
2. “The student will collaborate with the client to identify the components of the BPG desired for integration in the current care plan” (Bloom’s Cognitive Domain: Synthesis).

The Criterion

This portion of the learning objective is specific to the degree of satisfaction that the student will demonstrate the behaviour as evaluated by the educator. It is difficult in the field of nursing to assign numbers as an identification of the criterion. Therefore, you must use your own judgment of the situation to identify criteria for this portion of the learning objective. In terms of behaviours in the cognitive domain, the criterion may be an assigned number. For example, “… as demonstrated by the achievement of 80% upon the completion of a post-test.” When describing behaviours in the affective and psychomotor domain this may be more difficult. For example, “…as demonstrated in the clinical setting to the satisfaction of the educator.” Table 21 includes each of the levels from both Bloom and Benner in comparison with examples to assist you in leveling learning objectives; the level of learning objective can be used once the learner’s needs are identified. (Note: Level 5 is a combination of Bloom’s synthesis and evaluation.)
### Table 21: Leveling Learning Objectives using Bloom and Benner

<table>
<thead>
<tr>
<th>Level of Objective</th>
<th>Bloom's Taxonomy (Cognitive, Affective, Psychomotor)</th>
<th>Benner</th>
<th>Example</th>
<th>BPG objective</th>
</tr>
</thead>
</table>
| **Level One**      | (C) Knowledge — ability to recall or remember concept/information contained in the learning event  
                    (A) Receiving — selective attention to stimuli  
                    (P) Perception — senses cues that guide motor activity  
                    Set — mental, emotional and physical readiness to act | Novice  
                    » No previous knowledge of the concept/information contained in the learning event  
                    » Preceptor working with a student for the first time | 1st year student  
                    New graduate new to a specialty area  
                    Preceptor working with a student for the first time | Learner can identify a BPG relevant to the area of practice  
                    Learner can assemble required materials for wound care according to BPG recommendations. |
|                    | (C) Comprehension — can explain the concept/information contained in the learning event  
                    (A) Responding — responds to stimuli  
                    (P) Guided response — imitates and practices skills, often in discrete steps | Advanced Beginner  
                    » Enough knowledge and experience to understand the concept/information contained in the learning event  
                    » May require additional guidance/supervision to put knowledge into practice | New graduate with recent unit experience  
                    Educator new to teaching role | Learner explains importance of BPGs in improving care  
                    Learner participates in activities to promote BPGs |
| **Level Two**      | (C) Application utilizes previously learned concepts/information in new situations  
                    (A) Valuing — attaches value or worth  
                    (P) Mechanism — performs acts with increasing efficiency, confidence and proficiency | Competent  
                    » Able to plan using the concepts/information from the learning event for situations | Experienced nurse on new unit  
                    Experienced educator with no knowledge of BPG  
                    Nurse developing an experience base in a specialty area | Learner seeks other BPGs that may be appropriate for clients  
                    Learner can explain value of BPGs in improving care.  
                    Learner uses BPG recommendations routinely in care of most clients for which it is suitable |
|                    | (C) Analysis — able to generalize previously learned concepts/information to various situations, identifying causes and finding evidence to support use of knowledge and skills to obtain the best outcome  
                    (A) Organization — conceptualizes the value and resolves conflict between it and other values  
                    (P) Complete overt response — performs automatically | Proficient  
                    » Able to anticipate what will occur in response to use of knowledge and skills, intuition and ability to recognize acute changes in the situation as they present themselves.  
                    » Uses previously learned concepts/knowledge to anticipate the outcome of the plan | Experienced nurse with the confidence in knowledge base and experience to make modifications in practice based on individual client's condition | Learner identifies situations where modifications to BPG recommendations must be made to improve client care |
| **Level Three**    | (C) Synthesis/Evaluation — creatively or divergently applying prior knowledge and skills to produce a new or original whole.  
                    (A) Internalizing — integrates value into a value system that controls behaviour  
                    (P) Adaptation/organization — adapts skill sets, creates a new pattern to meet specific problem or situation | Expert  
                    » No longer relies on analytic rules, guidelines or principles. Is able to focus on the accurate region of the problem or situation because judgment is based on paradigms | Leader in nursing care within a unit  
                    Post-graduate nursing student  
                    Experienced nurse transferring to a new unit with BPG that are relevant to all client care | Learner seeks out other evidence sources to deal with unique problems  
                    Learner modifies approaches to improve patient care.  
                    Learner identifies ways to collect data to assess effectiveness of various approaches |

(C) = Cognitive  
(A) = Affective  
(P) = Psychomotor
Putting it all together
In these examples, final learning objectives may look like this:

1 At the completion of this learning event the student will describe the use of BPG as demonstrated by the achievement of 80% upon the completion of a post-test.

2 At the completion of this learning event the student will collaborate with the client to identify the components of the BPG desired for integration in the current care plan as demonstrated in the clinical setting to the satisfaction of the educator.

Implementing the Learning Plan
This section contains additional information about teaching and learning strategies and offers an alternative theory about how people learn. The following topics are discussed:

- Learning Styles
- Teaching Strategies

Learning Styles
Until the 1980s it was thought that most learners were verbal and computational (Brualdi, 1996). Howard Gardner (1983) proposed that there were eight types of intelligence. These were referred to as Multiple Intelligences. This model is a theory of cognitive functioning and proposes that each person has capacities in all eight intelligences. The intelligences usually work together and are always interacting with each other. An understanding of Gardner’s eight intelligences will aid an educator in planning and implementing an educational session. Table 22 describes the intelligences and corresponding teaching strategies to meet individual needs.
## Table 22: Strategies for Individual Learner Needs

<table>
<thead>
<tr>
<th>Multiple Intelligences</th>
<th>Learning Style</th>
<th>Teaching and Learning Strategies</th>
</tr>
</thead>
</table>
| **Linguistic** (word smart) | - Learns best by speaking, hearing and seeing  
- Likes to read, write and tell stories  
- Good at memorizing names, places, dates and trivia  
- Reads, writes and follows a lecture delivery with ease | - Didactic lecture format  
- Use narrative stories to give meaning to BPGs  
- Pre-reading packages  
- Well written handouts  
- Verbal debates  
- Word games |
| **Logical-mathematical** (number/reasoning smart) | - Associated with scientific and mathematical thinking  
- Has ability to detect patterns  
- Reasons deductively  
- Thinks logically  
- Explores patterns and relationships | - Experiments/research projects  
- Statistics: interpreting results  
- Problem based learning  
- Teach how to do literature searches to obtain BPG  
- Introduce the research that supports the BPG  
- Step-by-step instructions  
- Summaries |
| **Spatial** (picture smart) | - Ability to manipulate and create mental images to solve problems  
- Not limited to visual domains  
- Likes to draw, build, design, create things, daydream, look at pictures/slides | - Demonstrations  
- Overheads  
- PowerPoint presentations  
- Diagrams |
| **Musical** (music smart) | - Capacity to recognize and compose musical pitches, tones and rhythms  
- Learns best by rhythm, melody and music  
- Likes to sing, hum, listen, play and respond to music | - Mnemonic and rhythmic reminders  
- Play music as participants enter the room, or during evaluations |
| **Bodily-kinesthetic** (body smart) | - Learns best with sense of movement and touch  
- Processes knowledge through bodily sensations  
- Likes to move, touch, talk  
- Uses body language  
- Good at physical activities | - Hands-on practice or simulation of client care  
- Learners return the demonstration of the skill, knowledge or attitude |
| **Interpersonal** (people smart) | - Has the ability to understand, perceive and discriminate between people’s moods, feelings, motives and intelligences  
- Good leader, organizer, communicator, manipulator and mediator  
- Learns best by sharing, comparing, relating, cooperating | - Group work  
- Case studies  
- Simulations  
- Real interactions with clients  
- Brainstorming  
- Journal clubs |
| **Intrapersonal** (self smart) | - The ability to know oneself and to understand one’s own inner workings  
- Has ability to understand one’s own feeling and motivation  
- Learns best by working alone | - Individualized projects  
- Self-paced instruction  
- Self-reading packages, or self-testing  
- Online courses  
- Reflective journaling  
- Praise and reinforcement to confirm learner is on the right track |
| **Naturalistic** (nature smart) | - Enjoys biological chemical and physiological underpinning of the teaching | - Present the research behind the BPG |

Teaching Strategies

Dialogical Learning

Small group work

- Small group work in the clinical setting may be more difficult, as many experienced nurses may not have used this type of learning. You may want to do some education on small group work with participants or facilitators before you begin (Elwyn, et al, 2000).
- Case Studies are an excellent way to develop learners’ analytical and problem-solving skills, the types of skills needed to utilize BPG.
- Group work can begin with each group selecting one of the BPG to review. Present a short lecture on BPG, including prior background, content. Have the learners review the BPG as a group and compare the recommendations contained in the BPG to their current practice in their clinical area. They then present which recommendations are currently in place, which ones they have not seen or are not using and how they might incorporate the recommendations into their current practice.
- Pre-reading packages help learners come to group work with questions.
- Interactive workshops may also be effective but require resources and ongoing support of a clinical expert or champion.
  - Have a train-the-trainer course for resource nurses on the units, and organize regular meeting to discuss education issues.
  - Consider sending nurses to a Best Practice Champions Workshop offered by RNAO. It educates nurses on the use of the Toolkit for implementing BPG into clinical settings.
- Have learners work in small groups and ask them the following questions: How do you read a guideline? How will this guideline help you in practice? How strong is the evidence on which it is based? What can you take from this guideline today and apply to your practice tomorrow?
- In clinical areas set up scheduled times on patient care units to address questions about BPG.
- In clinical areas arrange for small group work to include the interdisciplinary team.

Journal Club

- Put students into journal clubs at the beginning of the semester. They pick an interest for the group (e.g., pediatrics, elder care, practice improvement) and then search BPG for interventions that apply to their topics. Have the students read and discuss the references of the BPG.
Experiential Learning

Role-playing

- Can be an effective technique, but you must be cognizant that some learners will not feel comfortable participating. If you can make case studies and role-playing scenarios more realistic you may have better participation. (Elwyn et al. 2000)

Brain Storming Sessions

- Ask the learners what they think would be a good solution to a particular problem, have them brainstorm for solutions and then introduce the BPG and compare the class solutions to the BPG interventions. This is particularly useful in the clinical area, as it can help acknowledge and recognize clinical expertise (Elwyn et al., 2000).

Case Scenarios

- Case Studies are an excellent way to develop learners’ analytical and problem-solving skills, needed to utilize BPG. As the educator you should develop realistic case scenarios using real-life events and help participants develop well-built clinical questions. This will allow learners to determine if the clinical questions are answered in a particular BPG and allow them to reference other sources to determine answers.

Examples of Case Scenario types include:
- Simulations/Vignettes – Departments can develop vignettes online, or have actual actors. One university has used actors to simulate a client centred care conversation. Another used online vignettes to teach therapeutic relationships.
- Practice Sites – Identify which sites use the BPG that you are interested in teaching and partner with them to do education, or have students visit that site. In the clinical area you could have nurses who are interested in implementing a BPG visit other sites that have already done this.

On-Site Visits

- Have students visit sites that are currently using BPG (e.g., one professor had her students attend a Breastfeeding Clinic, when studying the BPG Breastfeeding Best Practice Guidelines for Nurses).

Educational outreach visits

- BPG Champions meet with clinical nurses on the unit to discuss the use of BPG, one-on-one.
Library Seminar

- Have your hospital or school librarian present a session in the computer lab/nursing station that focuses on the use of the nursing databases and the Web to find peer reviewed articles (Crumley et al., 2001).
- Unit staff can meet with the hospital librarian in a classroom, or individual session or mini sessions on the unit, to help them to ask good clinical questions and search appropriate resources. This may be needed for staff who question the BPG and its value (Crumley et al. 2001).
- Have students in clinical courses write a critical analysis on the use of BPG in their practice setting.
- Have nurses discuss or reflect on their own personal experiences that may affect their nursing care.

Independent Strategies

Reflective Journals
Reflective journals allow the learner the opportunity to reflect on current practices, identify areas of strength as well as areas for improvement. Journal entries over time provide the learner with an evolving story of changes experienced as a result of the learning event. Reflective journals may be used as a personal development tool (i.e., not to be shared or evaluated by others), or may also be incorporated into the learning event as an assignment with evaluation criteria (i.e., shared between teacher and learner).

A consistent format for journal writings can also aid in establishing effective reflective writing. The following format takes the writer from reflection to action (College of Nurses of Ontario, 1996)

- **L** Looking back
- **E** Elaborate
- **A** Analyze critically
- **R** Reflecting
- **N** Next time…what would you do?

Strategies to Aid Journal Writing

1. Questions to aid personal reflections
   - What meaning does this topic/area have for you?
   - In what areas/situations do you feel you need to improve?
   - In what areas have you made progress? Specifically, what have you learned? What strengths can you identify?
   - What resources are available to you? Have you searched out
Educator's Resource: Integration of Best Practice Guidelines

resources to aid in your learning?
- What was helpful to you; what was a barrier?
- How are you feeling about this area of learning?
- What are the current or future opportunities to work on in these areas?
- How will you know?

2 Reflections regarding a specific learning event(s)
- What happened?
- What did I do?
- Who else was involved?
- How do I feel about what happened?
- What did I learn?
- How will I use this in future situations?

Evaluation
This section contains additional information about evaluating the learning event. The following topics are discussed:
- Evaluating reflective journals
- Evaluating the outcomes of learning using rubrics.

Evaluating Reflective Journals
When used as a specific teaching strategy, reflective journals can be evaluated according to the desired outcomes of using the reflective journal (i.e., evidence of self-reflection, progressive reflective and linkage to practice; enhanced ability to link reflections to concepts and implications for practice). Table 23 is a scoring guideline for journals.

Table 23: Reflective Journal Scoring Guideline

<table>
<thead>
<tr>
<th></th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Vague description</td>
<td>Detailed description of event but lacking personal reflections</td>
<td>Detailed description of event including some personal opinions</td>
<td>Detailed personal reflections including personal learnings</td>
<td>Personal reflections including implications for professional practice; linkage to relevant concepts and theories</td>
</tr>
</tbody>
</table>

Evaluating the Outcomes of Learning

Several methods can be used to identify and evaluate the desired outcomes of learning. Rubrics are guidelines for rating learner performance. They specify the expected outcomes for the level of the learner. Table 24 incorporates two models for determining outcomes of learning specifically related to use of evidence and best practice guidelines. The table integrates Benner’s (1984) “from novice-to-expert” and Steinaker & Bell’s (1979) “experiential taxonomy”. Table 25 is a rubric for the grading of written work and Table 26 is a rubric for grading performance (specific skills).

Table 24: Desired Competencies: Application of Research into Practice

<table>
<thead>
<tr>
<th>Benner</th>
<th>Exposure</th>
<th>Participation</th>
<th>Identification</th>
<th>Internalization</th>
<th>Dissemination</th>
</tr>
</thead>
<tbody>
<tr>
<td>Novice</td>
<td>Shows awareness of BPGs and application to patient care</td>
<td>Demonstrates ability to identify relevant evidence and/or BPGs</td>
<td>Identifies areas for further growth and learning re: BPGs and patient care</td>
<td>Able to identify evidence required or lacking</td>
<td>Open to new information</td>
</tr>
<tr>
<td>Advanced Beginner</td>
<td>Able to discuss how certain aspects of BPGs apply to patient scenarios</td>
<td>Asks questions re: evidence and rationale for decisions</td>
<td>Demonstrates a wish to acquire more information and seeks out resources</td>
<td>Able to explain the rationale for specific BPG</td>
<td>Shares information with others</td>
</tr>
<tr>
<td>Competent</td>
<td>Able to analyze and discuss rationale for care decisions</td>
<td>Actively seeks out sources of information</td>
<td>Identifies aspects of BPGs applicable to patient care and practice</td>
<td>Learning becomes integrated into practice</td>
<td>Attempts to share BPG information and influence the practice of others</td>
</tr>
<tr>
<td>Proficient</td>
<td>Able to identify opportunities for incorporating BPGs into existing practice</td>
<td>Consistently demonstrates critical analysis and appraisal skills</td>
<td>Able to analyze and interpret information</td>
<td>Able to transfer knowledge to a variety of situations</td>
<td>Shows ability to teach others; critical analysis of evidence incorporated into practice</td>
</tr>
<tr>
<td>Expert</td>
<td>Identifies sources and types of information required to enhance knowledge</td>
<td>Confidently articulates foundation for practice and rationale for clinical decisions</td>
<td>Able to apply problem solving skills and knowledge in a variety of situations</td>
<td>Seeks and applies new knowledge and research findings.</td>
<td>Advocates for the implementation of BPG into care delivery models and systems</td>
</tr>
</tbody>
</table>

### Table 25: Rubric for Grading of Written Work

<table>
<thead>
<tr>
<th>Grade</th>
<th>Topic / Issue / Question</th>
<th>Use of Evidence</th>
<th>Degree of Analysis</th>
<th>Application to Practice</th>
</tr>
</thead>
<tbody>
<tr>
<td>Superior (A+ / A-)</td>
<td>Applicable, insightful, plausible, sophisticated insight into concepts within current and future trends</td>
<td>Examples of primary sources evident; excellent integration of quoted material into paper</td>
<td>Analysis is fresh and exciting, poses new ways to view material and concepts</td>
<td>Makes clear and definitive links to patient, contextual and professional implications</td>
</tr>
<tr>
<td>Very Good (B+ / B-)</td>
<td>Promising, but slightly unclear or lacking insight and originality</td>
<td>Examples used to support most points; some evidence does not support main points, quotes well integrated</td>
<td>Evidence related, although points may not be clear</td>
<td>Application to practice described; fair degree of degree of breadth/depth of argument</td>
</tr>
<tr>
<td>Good/Average (C+ / C-)</td>
<td>Uses familiar concepts; offers relatively few new concepts for consideration; may be unclear</td>
<td>Examples used to support some points; quotes poorly integrated into sentences</td>
<td>Analysis offers nothing new; quotes do not relate to analysis</td>
<td>Surface level degree of application; does not demonstrate application beyond status quo; logic often fails</td>
</tr>
<tr>
<td>Needs help/Below average (D+ / D)</td>
<td>Difficult to identify; no originality; restatement of obvious/well identified position</td>
<td>Very few or weak examples; general failure to support arguments; quotes “plopped in” – not integrated into sentences in meaningful way</td>
<td>Very little, weak or no attempt to link evidence to argument</td>
<td>Application does not flow; no connections made</td>
</tr>
<tr>
<td>Does not meet Requirements / Failing paper (F)</td>
<td>Lack of comprehensive thought or structure</td>
<td>No evidence identified or referred to</td>
<td>No analysis evident</td>
<td>No application to practice included; inappropriate application</td>
</tr>
</tbody>
</table>

### Table 26: Rubric for Grading Performance (specific skills)

<table>
<thead>
<tr>
<th>Performance Levels</th>
<th>Questioning Skills</th>
<th>Search Skills</th>
<th>Critical Appraisal Skills</th>
<th>Clinical Decision Making</th>
<th>Sharing Information with Others</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exceptional</td>
<td>Continually asks questions, raises different points of view</td>
<td>Readily accesses internal &amp; external resources; able to conduct search independently</td>
<td>Integrates critical appraisal skills into practice</td>
<td>Synthesizes information to facilitate problem-based learning &amp; decision-making with self &amp; others</td>
<td>Freely shares information &amp; resources with others</td>
</tr>
<tr>
<td>Good</td>
<td>Contributes to discussion in a meaningful way</td>
<td>Accesses available resources; able to conduct search with assistance</td>
<td>Critically appraises information used for practice</td>
<td>Can confidently articulate evidence base for clinical practice &amp; decision-making</td>
<td>Provides meaningful contributions to discussions</td>
</tr>
<tr>
<td>Fair</td>
<td>Expresses own thoughts &amp; questions</td>
<td>Aware of resources but does not access</td>
<td>Demonstrates critical appraisal skills inconsistently</td>
<td>Attempts to explain rationale for clinical decisions</td>
<td>Shares superficial information in discussions</td>
</tr>
<tr>
<td>Not Evident</td>
<td>Does not ask questions</td>
<td>Does not access available resource</td>
<td>Does not critically appraise at all</td>
<td>Cannot provide rationale for clinical decisions beyond “traditional routine”</td>
<td>Does not contribute to discussions</td>
</tr>
</tbody>
</table>
